### **Learning Outcomes**

#### Scientific Qualification

- The students acquire a deep understanding of fundamental constructs, theories and models, as well as training and diagnostic methods in sport and exercise science. They can identify and analyse various influencing factors on processes related to the development and maintenance of different functional systems through physical activity and/or training in the domains of sports. They are capable of categorizing, discussing, and addressing exercise science questions based on evidence. Furthermore, they are aware of current research questions in sport and exercise science and can present and discuss them in a nuanced manner.
- The students are familiar with and understand various specialized training tools and training methods, and practical concepts for the development and maintenance of different functional systems in various domains of sports. Using the acquired subject-specific and methodological competencies, they can highlight, classify, and compare the different advantages and disadvantages of specific training tools, methods, and action concepts. They can also derive recipient-specific implementations in the practical domains of sports.
- They can independently analyse, address, and present a research question in the field of sport and exercise science from various perspectives and objectives.
- The students acquire advanced methodological skills in scientific working, data set evaluation and data analysis, and scientific communication. They can independently identify and analyse these methods and evaluate and discuss them in the relevant context. They can select, apply, and interpret these methodological skills for specific questions in the field.
- The students are familiar with various valid and reliable diagnostic methods and monitoring technologies in various application areas of sports, and can choose, apply, and evaluate them in a way that is suitable for the intended recipients. They can analyse and interpret the results and derive recommendations for applied sports in different domains. The students develop methodological skills in practical work with various diagnostic procedures.
- The students are able to independently research, understand, critically evaluate current scientific literature, identify research gaps, and formulate innovative research questions.
- The students are capable of independently developing and conducting their own research projects in the field of sport and exercise science, evaluating them using scientific methods, and publishing the results according to scientific and systematic criteria. They master advanced techniques of data collection and analysis and can apply them to new research contexts, as well as relate findings to theoretical concepts, models, and theories.
- The students can publish their research findings not only in (scientific) journals but also present them at (international) conferences and defend them in scientific discussions. They are capable of preparing their results for specific target audiences and transferring them into popular science formats.
- Completing the M.Sc. in Exercise Science and Training also prepares students to apply for doctoral studies, thus enabling a potential academic and/or scientific career.
- The students possess the ability to transfer theoretical knowledge and research findings into practical applications in areas such as training, performance- and health diagnostics, as well as in contexts promoting health and well-being. They can develop and evaluate innovative training concepts and frameworks and assess their effectiveness in various sports and movement-related contexts.
- They are trained to foster dialogue between science and practice and act as a bridge between research institutions and practical sports stakeholders such as clubs, sports associations, and companies. This includes conveying scientific insights to coaches, athletes, other staff, and laypersons, as well as integrating practical experiences back into scientific research.

Master's with 1 major Exercise Science and Training	JMU Würzburg • generated 19-Apr-2025 • exam. reg. data re-	page 4 / 27
(2023)	cord Master (120 ECTS) Exercise Science and Training - 2023	

• The students acquire the skills to effectively transfer knowledge across various environments, contexts, and formats. They can clearly and concisely communicate complex scientific concepts and research findings to diverse audiences, including academic peers, practitioners, policymakers, and the general public. This involves adapting their communication style and content to different formats such as scientific publications, presentations, workshops, and digital platforms. They are capable of bridging the gap between theory and practice, ensuring that their knowledge dissemination promotes understanding, engagement, and application in real-world contexts.

#### Ability to take up qualified employment

- The students have acquired professional knowledge, serving as the foundation for independent action in various fields within the realm of sports science, including research-oriented institutions, clubs, sports associations, and companies within the sports industry. Furthermore, the competencies gained during the course enable self-directed learning. This process combines personal and social skills with the acquisition of professional knowledge. In addition, fundamental insights and knowledge about institutions and organizations are conveyed. The practical phase also serves the purpose of reflecting on one's own professional self-concept and professional ethics.
- The students have acquired professional knowledge to implement the conceptual development, planning, and dissemination of training processes into practice at the interface between science and practice.

#### **Empowerment for civic engagement**

- The graduates have developed the willingness and ability to contribute their skills to participatory processes and actively engage in decision-making.
- They possess broad knowledge of (sports) scientific and societal issues and can take well-founded positions.
- In research, knowledge transfer, and practical sports work, the students are aware of their ethical responsibilities and actively address the societal impacts of their work.

#### **Personal development**

• Graduates are capable of working independently and taking personal responsibility. They can collaboratively work with other individuals or groups. Graduates can convey their conclusions and the underlying information and motivations clearly, based on the current state of research. They are able to engage in discussions with experts, athletes, and laypersons on information, issues, and solutions at a scientific level.

### Abbreviations used

Course types:  $\mathbf{E}$  = field trip,  $\mathbf{K}$  = colloquium,  $\mathbf{O}$  = conversatorium,  $\mathbf{P}$  = placement/lab course,  $\mathbf{R}$  = project,  $\mathbf{S}$  = seminar,  $\mathbf{T}$  = tutorial,  $\ddot{\mathbf{U}}$  = exercise,  $\mathbf{V}$  = lecture

Term: **SS** = summer semester, **WS** = winter semester

Methods of grading: **NUM** = numerical grade, **B**/**NB** = (not) successfully completed

Regulations: **(L)ASPO** = general academic and examination regulations (for teaching-degree programmes), **FSB** = subject-specific provisions, **SFB** = list of modules

Other: **A** = thesis, **LV** = course(s), **PL** = assessment(s), **TN** = participants, **VL** = prerequisite(s)

### Conventions

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

#### Notes

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

#### In accordance with

the general regulations governing the degree subject described in this module catalogue:

#### ASPO2015

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

#### 15-Feb-2023 (2023-21)

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.
