LA Gymnasien Biology (2009)	JMU Würzburg • generated 24-Aug-2021 • exam.	
	reg. data record Lehramt Gymnasien Biologie - 2009	

Abbreviations used

Course types: \mathbf{E} = field trip, \mathbf{K} = colloquium, \mathbf{O} = conversatorium, \mathbf{P} = placement/lab course, \mathbf{R} = project, \mathbf{S} = seminar, \mathbf{T} = tutorial, $\ddot{\mathbf{U}}$ = exercise, \mathbf{V} = lecture

Term: **SS** = summer semester, **WS** = winter semester

Methods of grading: **NUM** = numerical grade, **B/NB** = (not) successfully completed

Regulations: **(L)ASPO** = general academic and examination regulations (for teaching-degree programmes), **FSB** = subject-specific provisions, **SFB** = list of modules

Other: **A** = thesis, **LV** = course(s), **PL** = assessment(s), **TN** = participants, **VL** = prerequisite(s)

Conventions

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

Notes

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

In accordance with

the general regulations governing the degree subject described in this module catalogue:

LASPO2009

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

7-Aug-2012 (2012-89)

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.

Contents					

The first part of the course will acquaint students with the elementary building blocks of life as well as biological categories. Building on this knowledge, the course will then discuss the cell, the smallest unit of life, starting with its macroscopic structure before moving on to its microscopic structure. The course will point out differences and similarities between prokaryotic cells (bacteria, archaebacteria) and eukaryotic cells (animals, plants). Using the examples of plants and animals, the subsequent module components will introduce students to the phylogenetic diversity of eukaryotes. At the level of groups in the plant and animal kingdoms, students will acquire the fundamental knowledge necessary to understand the forms and functions of animal and plant organisms, with morphology and cytology being discussed in an evolutionary and ecological context. The contents of the module are relevant for biological disciplines at all levels of biological organisation. Students will also acquire and practise some of the fundamental preparation skills bioscientists are often required to possess.

Intended learning outcomes

Students will be familiar with the elementary building blocks of life, with biological categories as well as with the cell, the smallest unit of life, and its macroscopic and microscopic structure. They will understand the forms and functions of animal and plant organisms as well as morphology and cytology in an evolutionary and ecological context. Students will be able put their fundamental preparation skills into practice.

 $\label{eq:courses} \textbf{Courses} \ (type, number of weekly contact hours, language-if other than \ German)$

This module comprises 3 module components. Information on courses will be listed separately for each module component.

- 07-LA-BIO1-1-121: V + Ü (no information on SWS (weekly contact hours) and course language available)
- 07-LA-BIO1-2-121: V + Ü (no information on SWS (weekly contact hours) and course language available)
- 07-LA-BIO1-3-121: V + Ü (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language – if other than German, examination offered – if not every semester, information on whether module is creditable for bonus)

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Assessment in module component o7-LA-BIO1-1-121: Structure and Function of Cells (Lecture, Practice) Structure and Function of Cells (Lecture, Practice)

- 3 ECTS, Method of grading: numerical grade
- written examination (30 to 60 minutes)
- Other prerequisites: Admission prerequisite to assessment: regular attendance of exercises, seminars and lab courses (weekly courses: a maximum of one incident of unexcused absence and one excused absence for a legitimate reason; fortnightly courses: one incident of unexcused absence) and successful completion of the respective exercises (required percentage as specified at the beginning of the course). The preparation of logs (10 to 15 pages) is an admission prerequisite to assessment.

Assessment in module component 07-LA-BIO1-2-121: The Plant Kingdom (Lecture, Practice) The Plant Kingdom (Lecture, Practice)

- 4 ECTS, Method of grading: numerical grade
- written examination (30 to 60 minutes)

LA Gymnasien Biology (2009)	JMU Würzburg • generated 24-Aug-2021 • exam.	page 7 / 57
	reg. data record Lehramt Gymnasien Biologie - 2009	

• Other prerequisites: Admission prerequisite to assessment: regular attendance of exercises, seminars and lab courses (weekly courses: a maximum of one incident of unexcused absence and one excused absence for a legitimate reason; fortnightly courses: one incident of unexcused absence) and successful completion of the respective exercises (required percentage as specified at the beginning of the course). The preparation of logs (10 to 15 pages) is an admission prerequisite to assessment.

Assessment in module component o7-LA-BIO1-3-121: The Animal Kindom (Lecture, Practice) The Animal Kindom (Lecture, Practice)

- 4 ECTS, Method of grading: numerical grade
- written examination (approx. 30 to 60 minutes)
- Other prerequisites: Admission prerequisite to assessment: regular attendance of exercises, seminars and lab courses (weekly courses: a maximum of one incident of unexcused absence and one excused absence for a legitimate reason; fortnightly courses: one incident of unexcused absence) and successful completion of the respective exercises (required percentage as specified at the beginning of the course). The preparation of logs (10 to 15 pages) is an admission prerequisite to assessment.

This module will discuss the prokaryotic ultrastructure with its components and their functions as well as physiological performances of this group of organisms. Peculiarities of prokaryotes and factors that differentiate prokaryotes from eukaryotes will also be addressed. During practical exercises, students will become familiar both with important examples of bacteria and with morphological criteria for the classification of bacteria as well as the quantification of the same. Other experiments on physiology will also be performed during the course.

Intended learning outcomes

Knowledge of the structure of prokaryotic cells. Knowledge of the differences between prokaryotic and eukaryotic cells. Knowledge of the specific characteristics of the intracellular structure of prokaryotes. Familiarity with important representatives of the prokaryotic community. Ability to classify prokaryotes based on features visible under the microscope. Knowledge related to the growth of bacterial colonies. Basic familiarity with the biochemistry of bacterial metabolic pathways. Ability to use essential methods in biochemistry in the lab.

Courses (type, number of weekly contact hours, language – if other than German)

This module comprises 2 module components. Information on courses will be listed separately for each module component.

structu tion, th be drav gical sy	The first part of this module will discuss the structural and molecular fundamentals of the DNA as well as the structure and regulation of the eukaryotic genome. Building on the knowledge they acquired during this first section, the module will provide students with an overview of research methods in genetics and the conclusions to be drawn from research findings. The transmission of genetic information is an essential characteristic of biological systems. Students will become familiar with Mendelian genetics as well as modern findings on the transmission of genetic information.					
Intende	ed lear	ning outcomes				
Students are able to recognise the DNA as a repository of information that is a key factor determining the pheno- type of an organisms. They understand that regulation is necessary during genome expression and recognise the respective mechanisms. In addition, students are able to discuss current methods in genetics as well as the rele- vance these have to medicine.

The module will discuss the fundamental principles of the systematics and ecology of flowering plants. Students will acquire an overview of the major flowering plants to be found in the temperate zone as well as their ecological and economic importance. Using the field guide *Flora von Deutschland* by Schmeil-Fitschen, the course will demonstrate how dichotomous keys are used, and students will practise identifying freshly-gathered plants using dichotomous keys. Identifying plants, students will learn how to identify major morphological plant characteristics and will become familiar with the respective terminology. The module will also include field trips to typical habitats in the Botanical Garden and the vicinity of Würzburg. Students will become familiar with the common as well as scientific names of the plants found and will be introduced to the family- as well as species-specific characteristics of these plants. Students will practise using field guides and identification keys on site. Habitat ecological, geobotanical, climatic as well as conservation-relevant characteristics will also be discussed. The module will also include sessions at the Botanical Garden of the University of Würzburg with its outdoor facilities and greenhouses to help students acquire species identification skills.

Intended learning outcomes

Students have acquired knowledge and skills related to the ecology, systematics and taxonomy of indigenous flowering plants. They are familiar with the terminology of plant morphology and know how to use Floras and set up scientific herbaria.

Courses (type, number of weekly contact hours, language - if other than German)

 o7-LA-FLORA-2-092: E (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language – if other than German, examination offered – if not every semester, information on whether module is creditable for bonus)

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Assessment in module component o7-LA-FLORA-1-092: Systematics of the Flora of Germany Systematics of the Flora of Germany

- 4 ECTS, Method of grading: numerical grade
- written examination (approx. 45 minutes) and practical identification assignment (approx. 45 minutes)
- Assessment offered: once a year, summer semester
- Other prerequisites: Admission prerequisite to assessment: regular attendance of exercises, seminars and lab courses (weekly courses: a maximum of one incident of unexcused absence and one excused absence for a legitimate reason; fortnightly courses: one incident of unexcused absence) and successful completion of the respective exercises (required percentage as specified at the beginning of the course). The preparation of logs (10 to 15 pages) is an admission prerequisite to assessment.

Assessment in module component o7-LA-FLORA-2-092: Field Excursions on the Flora of Germany

- 2 ECTS, Method of grading: (not) successfully completed
- 5 field trip logs (approx. 1 to 2 pages per field trip)
- Assessment offered: once a year, summer semester

Students may complete the practical course *Schwerpunkt-Praktikum* either in zoology or in botany. The course will build on the knowledge and skills students have acquired in previous courses and will revisit selected aspects. Students will perform experiments to explore these aspects in more detail. The seminar will address classical and current topics in biology with students delivering presentations and discussing the respective topics.

Intended learning outcomes

Students completing the practical course in zoology will have become familiar with the circulatory system of different classes of vertebrates as well as with the internal structures of the organs of a range of vertebrates. In addition, they will know how to address problems in behavioural biology. Students completing the practical course in botany will become familiar with plant molecular physiology. They will learn how to investigate problems related to the development and adaptation of plants in/to different environmental conditions, using methods in molecular biology, cell biology and biophysics. In addition, students will become familiar with the challenges biotic and abiotic environmental factors pose to plants as well as with mechanisms for overcoming these. Students will be introduced to current topics in biology and will learn how to use research literature. They will be able to extract key facts from a scientific text and to present these in a comprehensible way.

Courses (type, number of weekly contact hours, language — if other than German)

This module has 2 components; information on courses listed separately for each component.

- 07-GY-FBW-B-1-092: Ü + S (no information on language and number of weekly contact hours available)
- 07-GY-FBW-Z-2-092: Ü + S (no information on language and number of weekly contact hours available)

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

This module has the following 2 assessment components. To pass the module as a whole students must pass one of the two assessment components.

Assessment component to module component 07-GY-FBW-B-1-092: Übung im Schwerpunkt Botanik für das Lehramt Gymnasium

- 8 ECTS credits, method of grading: numerical grade
- a) written examination (30-120 minutes) or b) log (10-30 pages) or c) oral examination of on candidate each (20-60 minutes) or d) oral examination in groups up to three candidates or e) presentation (20-45 minutes) or f) portfolio (30-120 hours total)
- Other prerequisites: admission prerequisite to assessment: Regular attendance of exercises, seminars and lab courses (weekly courses: a maximum of one incident of unexcused absence and one excused absence for a legitimate reason; fortnightly courses: one incident of unexcused absence) and successful completion of the respective exercises (required percentage as specified at the beginning of the course). The preparation of logs (10 to 15 pages) is an admission prerequisite to assessment.

Assessment component to module component o7-GY-FBW-Z-2-092: Übung im Schwerpunkt Zoologie für das Lehramt Gymnasium

- 8 ECTS credits, method of grading: numerical grade
- a) written examination (30-120 minutes) or b) log (10-30 pages) or c) oral examination of on candidate each (20-60 minutes) or d) oral examination in groups up to three candidates or e) presentation (20-45 minutes)

Duratio	on	Module level	Other prerequisites		
2 seme	ester	undergraduate	By way of exception, additional prerequisites are listed in the section of assessments.		

[Version 1: This seminar will provide students preparing for the written state examination with an opportunity to revise key topics in biology didactics. In small teams, students will prepare and deliver presentations on three key areas. The first block will discuss an area of the theory of biology didactics, this will be followed by the discussion of a topic in the biology classroom with respect to aspects of the scientific discipline and a didactic analysis. In the final part of the course, students will solve an exam paper from a previous year.] [Version 2: Using examples from the classroom, the seminar will acquaint students with specific teaching aids (originals, preparations and media) for use in the biology classroom and will assess these with regard to the media literacy skills to be developed. The seminar will discuss both traditional aids used in the biology classroom and modern media. After having received a theoretical introduction to teaching aids, students will be arranged into small teams that will deliver lessons or individual phases of lessons on specific topics from the curriculum. They will focus on a teaching aid of their choice which will subsequently be assessed with regard to aspects of media didactics.]

Intended learning outcomes

Familiarity with relevant aspects of biology didactics and awareness of the fact that typical methods of the discipline play a central role in the biology classroom. Ability to design lively biology lessons, using original objects and teaching aids. Ability to use methods in biology in a way that promotes the learning processes of pupils. Familiarity with both biology-specific and interdisciplinary topics from the curriculum for *Grundschule*. Ability to prepare scientific analyses of selected topics from the curriculum for *Grundschule*. Ability present these topics in a manner that is tailored to the target group. Ability to prepare didactic analyses of topics from the curriculum for *Grundschule*. Ability to translate, with the help of didactic analyses, selected topics from the curriculum into teaching sequences and lessons as well as to deliver these teaching sequences and lessons, applying problem-based and/or open teaching methods. Overview of experiments on botany, zoology and human biology typically performed in the *Grundschule* biology classroom. Ability to implement the experiments in the classroom and to integrate them into activity and problem-based lessons. Insight into frameworks for education in *Grundschule*. Insight into legal and social factors that influence schools.

Courses (type, number of weekly contact hours, language — if other than German)

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 07-LA-FDGRU-2-092: S (no information on SWS (weekly contact hours) and course language available)
- 07-LA-FDGRU-1-092: V + S (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language – if other than German, examination offered – if not every semester, information on whether module is creditable for bonus)

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Assessment in module component o7-LA-FDGRU-2-092: School-Type-Specific Didactics in Biology (Seminar)

- 2 ECTS, Method of grading: numerical grade
- written examination (30 to 45 minutes) or term paper (10 to 15 pages)
- Other prerequisites: Admission prerequisite to assessment: regular attendance of exercises, seminars and lab courses (weekly courses: a maximum of one incident of unexcused absence and one excused absence for a legitimate reason; fortnightly courses: one incident of unexcused absence) and successful

Freier Bereich (general as well as subject-specific electives)

(0-15 ECTS credits)

Teaching degree students must take modules worth a total of 15 ECTS credits in the area Freier Bereich (general as well as subject-specific electives) (Section 9 LASPO (general academic and examination regulations for teaching-degree programmes)). To achieve the required number of ECTS credits, students may take any modules from the areas below.

Freier Bereich -- interdisciplinary: The interdisciplinary additional offer for a teaching degree can be found in the respective Annex "Ergänzende Bestimmungen für den "Freien Bereich" im Rahmen des Studiums für ein Lehramt".

Duratio	Duration Module level Othe		Other prerequisites	Other prerequisites		
1 seme	1 semester undergraduate		By way of exception, additional prerequisites are listed in the section on assessments.			
Conten	nts		·			

A combination of lab work and field trips, this module will provide students with an insight both into the organismal diversity of a marine ecosystem and into the biocenosis of the littoral of the island of Helgoland in the North Sea.

Intended learning outcomes

Students are familiar with the morphology, developmental biology, physiology and ecology of organisms in a marine ecosystem.

Courses (type, number of weekly contact hours, language - if other than German)

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 07-4S1MZ3-1MO-092: Ü (no information on SWS (weekly contact hours) and course language available)
- 07-4S1MZ3-2MO-092: S (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language – if other than German, examination offered – if not every semester, information on whether module is creditable for bonus)

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Assessment in module component o7-4S1MZ3-1MO-092: Ecology and Developmental Biology of Marine Organisms

- 4 ECTS, Method of grading: numerical grade
- log (approx. 10 to 20 pages)
- Assessment offered: once a year, summer semester
- Other prerequisites: Admission prerequisite to assessment: regular attendance of exercises and successful completion of the respective exercises as specified at the beginning of the course.

Assessment in module component o7-4S1MZ3-2MO-092: Seminar on Marine Biology

- 1 ECTS, Method of grading: (not) successfully completed
- presentation (approx. 20 to 30 minutes)
- Assessment offered: once a year, summer semester

Allocation of places

Information on the allocation of places will be listed separately for each module component.

o7-4S1MZ3-1MO-092: Number of places: 18. Should the number of applications exceed the number of available places, places will be allocated as follows: Places will primarily be allocated to students of the Bachelor's degree subject Biologie (Biology) with 180 ECTS credits. Should the module be used in other subjects, there will be two quotas: 95% of places will be allocated to students of the Bachelor's degree subject Biologie (Biology) with 180 ECTS credits and 5% of places (a minimum of one participant in total) will be allocated to students of the Bachelor's degree subject Biologie (Biology) with 180 ECTS credits and 5% of places (Biology) with 60 ECTS credits and to students of the Bachelor's degree subjects Computational Mathematics and Mathematik (Mathematics), each with 180 ECTS credits, as part of the application-oriented subject Biology (as well as potentially to students of other 'importing' subjects). Should the number of places available in one quota exceed the number of applications, the remaining places will be allocated to applicants from the

LA Gymnasien Biology (2009)	JMU Würzburg • generated 24-Aug-2021 • exam.	page 47 / 57
	reg. data record Lehramt Gymnasien Biologie - 2009	

other quota. Should there be, within one module component, several courses with a restricted number of places, there will be a uniform regulation for the courses of one module component. In this case, places on all courses of a module component that are concerned will be allocated in a standardised procedure. In this procedure, applicants who already have successfully completed at least one other module component of the respective module will be given preferential consideration. A waiting list will be maintained and places re-allocated as they become available. Selection process group 1 (95%): Places will primarily be allocated according to the applicants' previous academic achievements. For this purpose, applicants will be ranked according to the number of ECTS credits they have achieved and their average grade of all assessments taken during their studies or of all module components in the subject of Biologie (Biology) (excluding Chemie (Chemistry), Physik (Physics), Mathematik (Mathematics)) at the time of application. This will be done as follows: First, applicants will be ranked, firstly, according to their average grade weighted according to the number of ECTS credits (qualitative ranking) and, secondly, according to their total number of ECTS credits achieved (quantitative ranking). The applicants' position in a third ranking will be calculated as the sum of these two rankings, and places will be allocated according to this third ranking. Among applicants with the same ranking, places will be allocated according to the qualitative ranking or otherwise by lot. Selection process group 2 (5%): Places will be allocated according to the following quotas: Quota 1 (50% of places): total number of ECTS credits already achieved in modules/module components of the Faculty of Biology; among applicants with the same number of ECTS credits achieved, places will be allocated by lot. Quota 2 (25% of places): number of subject semesters of the respective applicant; among applicants with the same number of subject semesters, places will be allocated by lot. Quota 3 (25% of places): allocation by lot. Should the module be used only in the Bachelor's degree subject Biologie (Biology) with 180 ECTS credits, places will be allocated according to the selection process of group 1.

The co	urse wi	ll build on the knowledge	and skills students	have acquired in pre	either in zoology or in botany. evious courses and will revisit se-

The course will build on the knowledge and skills students have acquired in previous courses and will revisit selected aspects. Students will perform experiments to explore these aspects in more detail. The seminar will address classical and current topics in biology with students delivering presentations and discussing the respective topics.] [Version 2: This module will provide students with an overview of practical biology sessions that are implemented in a teach'n'learn lab/teach'n'learn garden. Having acquired an overview of major methods in biology, students will learn to incorporate these into school-specific contexts. Students will prepare classroom and lab sessions, will be trained in important techniques for measuring how effective a session was and will practise teaching these sessions to pupils in the teach'n'learn lab/teach'n'learn garden. This will also require close cooperation with the supervising teacher of the placement class.]

Intended learning outcomes

Knowledge of both traditional and modern methods in biology. - Ability to prepare sessions in a teach'n'learn lab/teach'n'learn garden and perform the respective follow-up work. - Familiarity with ways to help pupils become interested and motivated learners.

Courses (type, number of weekly contact hours, language-if other than German)

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- 07-RG-FDASL2-1-092: Ü (no information on SWS (weekly contact hours) and course language available)
- 07-RG-FDASL2-2-092: S (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module is creditable for bonus)

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Assessment in module component o7-RG-FDASL2-1-092: Advanced Course on "Working in the Teacher-Training Lab/Teach'n'LearnGarden" (Practice)

- 2 ECTS, Method of grading: (not) successfully completed
- portfolio (7 to 10 pages)
- Other prerequisites: Admission prerequisite to assessment: regular attendance of exercises, seminars and lab courses (weekly courses: a maximum of one incident of unexcused absence and one excused absence for a legitimate reason; fortnightly courses: one incident of unexcused absence) and successful completion of the respective exercises (required percentage as specified at the beginning of the course). The preparation of logs (10 to 15 pages) is an admission prerequisite to assessment.

Assessment in module component o7-RG-FDASL2-2-092: Introduction to Educational Research (Seminar)

- 2 ECTS, Method of grading: (not) successfully completed
- term paper (7 to 10 pages)
- Other prerequisites: Admission prerequisite to assessment: regular attendance of exercises, seminars and lab courses (weekly courses: a maximum of one incident of unexcused absence and one excused absence for a legitimate reason; fortnightly courses: one incident of unexcused absence) and successful

Thesis

(10 ECTS credits)

Preparation of a written Hausarbeit (thesis) in accordance with the provisions of Section 29 LPO I (examination regulations for teaching-degree programmes) is a prerequisite for teaching degree students to be admitted to the Erste Staatsprüfung (First State Examination). In accordance with the provisions of Section 29 LPO I, students studying for a teaching degree Gymnasium may write this thesis in one of the subjects they selected as vertieft studiertes Fach (subject studied with a focus on the scientific discipline) or in the subject Erziehungswissenschaften (Educational Science). Pursuant to Section 29 Subsection 1 Sentence 2 LPO I, students may also choose to write an interdisciplinary thesis.
