

## Subdivided Module Catalogue for the Subject

## **Psychology**

as a Bachelor's with 1 major with the degree "Bachelor of Science" (180 ECTS credits)

> Examination regulations version: 2010 Responsible: Faculty of Human Sciences Responsible: Institute of Psychology

## **Course of Studies - Contents and Objectives**

The graduate holds a degree in the field of psychology which qualifies for professional work and is internationally comparable. This degree qualifies the graduate for a broad spectrum of working fields at technical institutions and in the private sector, including in the fields of health, education and teaching, cultural and professional work.

The graduate achieves the basic requirement to enrol in a Master's course in psychology concentrating on scientific work as well as preparing for higher education as a psychotherapist in addition to providing further training in professional qualifications.

The graduate understands basic principles of psychology and is capable of utilizing the applicable scientific methods.

The specific skills possessed by the graduate are as follows:

### General skills:

- Critical reflection of scientific discoveries and literature and understanding of their context within the subject
- Oral and written presentation of achieved knowledge
- Implementation of independent scientific projects
- Composition of scientific texts according to professional standards

### Methodical skills:

- Solid theoretical knowledge of psychological methods
- Substantiated skills in the collection and analysis of data, especially statistics

Subject-specific skills in the following areas of psychology:

- Methodology and diagnostics
- Physiological and anatomical foundations of cognition and behaviour
- History of Psychology, Cognitive Psychology, Emotion and Motivation, Developmental Psychology, Social Psychology, Biological Psychology, Differential and Personality Psychology as the basic subjects
- Clinical Psychology and Psychological Intervention, Educational Psychology and Economic Psychology with Ergonomics as applied subjects

Work-relevant, practical skills: The graduate has gained basic insight into working in a job under the qualified supervision of a psychologist within the context of a 12-week orientation internship.

## **Abbreviations used**

Course types:  $\mathbf{E} = \text{field trip}$ ,  $\mathbf{K} = \text{colloquium}$ ,  $\mathbf{O} = \text{conversatorium}$ ,  $\mathbf{P} = \text{placement/lab course}$ ,  $\mathbf{R} = \text{project}$ ,  $\mathbf{S} = \text{seminar}$ ,  $\mathbf{T} = \text{tutorial}$ ,  $\ddot{\mathbf{U}} = \text{exercise}$ ,  $\mathbf{V} = \text{lecture}$ 

Term: **SS** = summer semester, **WS** = winter semester

Methods of grading: **NUM** = numerical grade, **B/NB** = (not) successfully completed

Regulations: **(L)ASPO** = general academic and examination regulations (for teaching-degree programmes), **FSB** = subject-specific provisions, **SFB** = list of modules

Other: A = thesis, LV = course(s), PL = assessment(s), TN = participants, VL = prerequisite(s)

### **Conventions**

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

### **Notes**

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

### In accordance with

the general regulations governing the degree subject described in this module catalogue:

### ASP02009

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

### 12-Apr-2011 (2011-36)

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.

In this module, the students acquire basic knowledge of the subject, phenomena, theories and methods of General Psychology. They become acquainted with the principles of human learning, action control, perception, attentiveness, concept formation, speech, memory and knowledge. In the seminar, the students gain knowledge of current research results of selected subdisciplines of General Psychology. In the practical part, they become fa-

miliar with experimental techniques of General Psychology.

### **Intended learning outcomes**

This module enables the students to factor in findings of General Psychology when carrying out own actions as well as when dealing with applied psychological problems, for example when creating websites or learning environments. These factors might include findings about the principles of human attentiveness or human memory. Furthermore, they acquire competencies in planning, carrying out and evaluating scientific experiments. These competencies serve as a foundation for independent scientific work. In addition, the students learn to give scientific presentations and to write scientific reports.

 ${f Courses}$  (type, number of weekly contact hours, language — if other than German)

This module comprises 2 module components. Information on courses will be listed separately for each module component.

Conter	Contents				

In this module, the students acquire basic knowledge of the central psychological theories and findings of the research fields of motivation and emotion. The lecture comprises the subject areas, theories, methods, application and practice of Psychology of Motivation and Psychology of Emotion. The seminar elaborates on selected, alternating subject areas (e.g. emotion regulation, impulsivity, aggression).

### **Intended learning outcomes**

The students acquire professional and practical skills, which are useful for the further course of studies and for their future occupation. The students acquire profound professional knowledge of central subject areas, theories and methods of Psychology of Emotion and Motivation, while also learning to transfer this basic knowledge to application subjects, especially the one's of the Master's degree programme. Furthermore, the students already acquire theoretical, empirical and application-oriented competencies, which can be useful in professional life (e.g., organising work processes in a motivating manner), after finishing the first university degree programme (BSc.).

### **Contents**

In this module, the students acquire basic knowledge of Biopsychology, which deals with biological processes associated with intrapsychic processes. The lecture comprises the theories and subject areas of Biopsychology, including applied bio-psychological questions. It focuses on experimental animal and human studies that examine the interactions between physical and mental factors. The seminar elaborates on selected, alternating subject areas (e.g. perception and attentiveness, motor skills, learning and memory, emotion and motivation, laterality) and provides a detailed insight into bio-psychological methods (e.g. EEG, MRI, peripheral physiology, neurochemistry, genetics, neurostimulation).

### **Intended learning outcomes**

The students acquire profound knowledge of the methodological and content-related questions of Biopsychology. They acquire professional knowledge of the dynamic interactions between mental and biological processes and learn to transfer this knowledge to the application subjects of Psychology (Clinical Psychology, Educational Psychology, Industrial Psychology, Intervention Psychology).

Psychological diagnostics entails professional action and decision making according to strict methodological criteria. Therefore, diagnostics is subject to its own scientific and pragmatic standards. This module introduces the corresponding methods and approaches to the identification of individual differences by means of observation, questioning, testing and questionnaires as well as the recording in reports and assessments. Furthermore, it elaborates on classical test theory and probabilistic test theory. In addition, it provides a technical introduction to selected psychodiagnostic methods. The lecture deals with approaches to professional scientific action and decision making which are exercised in the practical parts.

### **Intended learning outcomes**

Competencies in raising and recording psychodiagnostic findings about individuals based on observation, questioning, tests and questionnaires. Knowledge of classical probabilistic approaches to the organisation of tests and questionnaires as well as the terms and methods of evaluating tests and questionnaires. SEQ CHAPTER h r 1 Practice in planning and developing tests, item analyses, factor analyses, quality criteria. Introduction to classical and probabilistic test theory. Knowledge of standardised research procedures of Differential Psychology, personality research and psychological diagnostics as well as self-experience in carrying out and evaluating these procedures. The competencies are meant to be transferred and applied to other basic and application subjects of the BSc..

In this module, the students form small groups to participate in the planning, carrying out, evaluation and presentation of empirico-experimental studies in the field of Psychology. The presentation of the empirical research results takes place in a poster congress at the end of every semester. Furthermore, the students gain experience in the field of psychological studies by volunteering as test subjects for 25 hours.

### **Intended learning outcomes**

Knowledge of empirical research methods of Psychology, ability to apply and evaluate these methods.

This lectures provides an overview of the History of Psychology whilst focusing on selected studies and individual chapters of history such as the Psychology of Thought Processes of the Würzburg School. The students gain insights into the historical and historico-scientific contexts of the origin and development of various basic fields and application fields of Psychology.

### **Intended learning outcomes**

The module provides an introduction to scientific and social contexts regarding the origin and development of Psychology. The students acquire central professional skills in reflecting the situation of the subject and of the profession of Psychology within the area of other sciences and within the whole of society. Furthermore, the students learn to assess the historical conditionality of central theoretical and methodological approaches to psychological research and practice. The competencies are meant to be transferred and applied to other basic and application subjects of the BSc.. Module component: Abbreviation: o6-PSY-EiG-1 Version: 2009-WS Title: Introduction to the History of Psychology, Degree of Obligation: Obligatory SWS: 2 ECTS credits: 3.

**Courses** (type, number of weekly contact hours, language — if other than German)

V (no information on SWS (weekly contact hours) and course language available)

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)

a) written examination (approx. 60 minutes) or b) oral examination (approx. 30 minutes)

### Allocation of places

Only as part of pool of general key skills (ASQ): maximum 10 places. Places will be allocated according to the number of subject semesters. Among applicants with the same number of subject semesters, places will be allocated by lot.

1 seme	ster	undergraduate	Admission prerequisite to assessment: one presentation (approx. 20 mi				
			nutes) in one of the seminars.				

### **Contents**

This module deals with the cognitive and emotional principles of human decision making and their interactions during judgement formation. Furthermore, it examines human decision making in an economic context, for example during processes of applicant selection or investment decisions at the stock exchange.

### **Intended learning outcomes**

The students acquire profound, theoretical professional skills as well as comprehensive methodological competencies in the subdiscipline of human decision making. They apply their advanced professional knowledge during the further course of studies, especially during the writing of their Bachelor's thesis and during the Master's degree programme. The interdisciplinarity of the module promotes the students' abilities to integrate different theoretical perspectives and approaches. In addition, the students acquire special professional competencies, which equip them for an academic career and which can already be useful in professional life after finishing the first university degree programme (BSc.), for example for optimising processes of decision making in work life.

**Courses** (type, number of weekly contact hours, language — if other than German)

S + S (no information on SWS (weekly contact hours) and course language available)

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)

written examination (90 minutes)

### Allocation of places

Number of places: maximum 30. Should the number of applications exceed the number of available places, places will be allocated as follows: Applicants who have not yet achieved the required number of ECTS credits in mandatory electives will be given preferential consideration. The remaining places, if and when any become available, will be allocated to applicants who already have achieved the required number of ECTS credits. Within these groups, places will be allocated according to the following quotas: Quota 1 (80% of places): average grade achieved in of modules o6-PSY-SozPSY and o6-PSY-WiPSY; among applicants with the same average grade, places will be allocated by lot. Quota 2 (20% of places): number of subject semesters of the respective applicant; among applicants with the same number of subject semesters, places will be allocated by lot.

### **Contents**

In this module, the students acquire basic knowledge of central subject areas, theories and findings of Developmental Psychology. Part A and B of the lecture provide an overview of the principles of cognitive, social, emotional and motivational human development across the lifespan. The seminar elaborates on selected, alternating subject areas (e.g early childhood, cognitive development, Evolutionary Developmental Psychology).

### **Intended learning outcomes**

The students acquire professional and practical skills, which are useful for the further course of studies and for their future occupation. These skills include basic knowledge of theories, methods and findings of Developmental Psychology as well as basic knowledge of applicabilities resulting from Developmental Psychology. Furthermore, the competencies acquired facilitate the introduction to focus areas of the Master's degree programme and can be applied in professional life in various ways.

**Courses** (type, number of weekly contact hours, language — if other than German)

This module comprises 2 module components. Information on courses will be listed separately for each module component.

This module provides an overview of the models and theories on the description of cognitive structures and mechanisms for controlling target-oriented behaviour as well as the development and adaptation to the environment. Furthermore, individual projects deduce further research questions by critically examining current topics regarding the necessity of cognitive mechanisms and structures of behaviour control.

### **Intended learning outcomes**

The students acquire profound theoretical skills as well as comprehensive methodological competencies in the subdiscipline of cognitive behaviour control. They apply their advanced professional knowledge during the further course of studies, especially during the writing of their Bachelor's thesis and during the Master's degree programme. The module's orientation on research promotes the students' ability to evaluate research results in a critical yet productive manner. In addition, the students acquire professional competencies, which prepare them for an academic career.

Conten	Contents				

The module offers detailed insights into the principles of Clinical Psychology and Intervention Psychology with a focus on diagnostics, epidemiology, aetiology and therapy of the main psychopathologies. The lecture provides an introduction to the methods of Clinical Psychology and Experimental Psychopathology and discusses the main clinical pictures relevant to clinical practice. In the lecture on Intervention Psychology, the students acquire basic knowledge of the theoretical and practical framework conditions of intervention and psychotherapy. It provides an overview of selected psychotherapeutic methods and their scientific principles. It focuses on giving a detailed description of the interventions while also showing how individual interventions can be applied to or also modified for specific clinical pictures; the seminars elaborate on the application and modification of these intervention methods as well as on alternating subject areas of Clinical Psychology and Intervention Psychology. Furthermore, the application and commonness of psychotherapeutic methods are discussed.

### **Intended learning outcomes**

The students acquire professional skills in the field of Clinical Psychology and Intervention Psychology and are therefore able to classify the main psychopathologies, they know the main aetiological models of these disorders and can evaluate classical therapeutic approaches. This basic methodological knowledge enables the students to critically evaluate future research findings. The students acquire profound, theoretical professional skills as well as comprehensive methodological competencies in the field of Intervention and Psychotherapy Research and its practical application. They apply their advanced professional knowledge during the further course of studies, especially during the writing of their Bachelor's thesis and during the Master's degree programme.

### **Contents**

In this module, the students acquire basic knowledge of central theories and findings of Educational Psychology. The lecture provides an overview of the basic methods and results of Educational and Instructional Psychology. The two seminars on Educational Psychology discuss the influence of cognitive and motivational variables on academic performance (Educational Psychology 1) and illustrate perspectives of Instructional Psychology with the example of modern learning and teaching research (Educational Psychology 1). The seminars on learning difficulties and behavioural disorders discuss causes, diagnostic possibilities and therapeutic approaches regarding school problems and behavioural abnormalities.

### **Intended learning outcomes**

The students acquire professional skills and practical competencies, which are useful for the further course of studies as well as for practical work. They become familiar with basic methodological approaches in the field of Educational Psychology and gain representative insights into the contents of all of its subdisciplines, which facilitate an introduction to the main areas of the Master's degree programme. The competencies in the field of Educational Psychology acquired during the first university degree can be applied in professional life in various ways.

During the work placements, the students gain insights into the occupational activity of a psychologist in a corresponding institution and/or in the private sector under the guidance of a supervisor with a diploma or a Master's degree in Psychology. The students practice and improve the skills acquired in the courses.

### **Intended learning outcomes**

The students learn to apply theoretical and practical aspects of the degree course to new tasks of the work placements. They establish first contacts in the vocational world and therefore lay a foundation for their future choice of occupation and the specialisation of their Master's degree programme.

**Courses** (type, number of weekly contact hours, language — if other than German)

### **Contents**

In this module, the students acquire basic knowledge of the principles of thinking, feeling and behaviour in a social context. The lecture comprises the subject areas, theories and methods of Social Psychology, including applied socio-psychological questions. The seminar elaborates on selected, alternating subject areas (e.g. social cognition, research on attitude, prejudices). In the second part of the module, the students carry out exercises on the subject contents and critically examine relevant literature to prepare for the examination.

### **Intended learning outcomes**

The students acquire professional skills and social competencies, which can be useful for everyday situations. They gain profound professional knowledge of central subject areas, theories and methods of Social Psychology while also learning to transfer this basic knowledge to application subjects, especially the one's of the Master's degree programme. Furthermore, the students already acquire theoretical, empirical and application-oriented competencies, which can be useful in everyday life (e.g. for solving social conflicts and central problems of social influenceability), after finishing the first university degree programme (BSc.).

Contents					

The module teaches the basics of descriptive and inferential statistics (descriptive statistics, graphs, regression and correlation analysis, probability theory, Bayesian, distributions, sampling techniques, estimation principles, confidence intervals, theory of null hypothesis testing, parametric and non-parametric methods for uni- and bivariate records, contingency table analysis, analysis of variance). The principles of statistical analysis of data will be discussed in a lesson on the basis of examples. The practical application of the methods is trained in tutorials with the help of calculating exercises.

### Intended learning outcomes

The module teaches the basics of descriptive and inferential statistics (descriptive statistics, graphs, regression and correlation analysis, probability theory, Bayesian, distributions, sampling techniques, estimation principles, confidence intervals, theory of null hypothesis testing, parametric and nonparametric methods for uni- and bivariate records, contingency table analysis, analysis of variance). The principles of the statistical analysis of data will be discussed in a lesson with examples. The practical application of the method is trained in tutorials by calculating exercises.

**Courses** (type, number of weekly contact hours, language — if other than German)

This module comprises 2 module components. Information on courses will be listed separately for each module component.

- o6-PSY-STAT-1-092: S + Ü (no information on SWS (weekly contact hours) and course language available)
- o6-PSY-STAT-2-092: S + Ü (no information on SWS (weekly contact hours) and course language available)

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)

Assessment in this module comprises the assessments in the individual module components as specified below. Unless stated otherwise, successful completion of the module will require successful completion of all individual assessments.

Duration Module level O		Other prerequisites	1		
2 semester undergraduate					
Contents					

In this module, the students acquire basic knowledge of the principles of experience and behaviour in the economic environment. The lecture comprises the subject areas, theories, methods, application and practice of Industrial and Organisational Psychology. The seminars cover selected, alternating subject areas of this psychological field of application (e.g. personnel selection, leadership, advertising effect).

### **Intended learning outcomes**

The students acquire professional and practical skills, which are useful for the further course of studies and their future occupation. They gain profound professional knowledge of central results, theories and methods of Industrial and Organisational Psychology and learn to apply this knowledge to practice as well as to the Master's degree programme. After finishing the first university degree programme (BSc.), the students have already acquired theoretical, empirical and application-oriented competencies, which can be useful in everyday life and in professional life (e.g. personnel selection and management).

**Courses** (type, number of weekly contact hours, language — if other than German)

This module comprises 3 module components. Information on courses will be listed separately for each module component.

- o6-PSY-WiPSY-1-102: V + V (no information on SWS (weekly contact hours) and course language available)
- o6-PSY-WiPSY-2-102: S (no information on SWS (weekly contact hours) and course language available)
- o6-PSY-WiPSY-3-102: S (no information on SWS (weekly contact hours) and course language available)
