# Biomedicine

as a Bachelor's with 1 major with the degree "Bachelor of Science" (180 ECTS credits)

> Examination regulations version: 2009 Responsible: Faculty of Medicine Responsible: Faculty of Biology

JMU Würzburg • generated 26-Aug-2024 • exam. reg. data record 82|300|-|-|H|2009

## **Course of Studies - Contents and Objectives**

The bachelor's course of Biomedicine is provided by the Faculty of Medicine and the Faculty of Biology of the JMU as a course with a focus on basic research and a Bachelor of Science (B.Sc) degree. It is part of a consecutive bachelor and master program.

The object of this course is on the one hand to convey medical and scientific knowledge of the whole scope of medicine. On the other hand the students are prepared to use modern methods of molecular biology. In the process of studying the students acquire the necessary expertise and the abilities to conduct research. With a thesis the students prove their ability to process and represent a biomedical problem largely independent with a definite deadline and predetermined scientific methods.

## Abbreviations used

Course types:  $\mathbf{E}$  = field trip,  $\mathbf{K}$  = colloquium,  $\mathbf{O}$  = conversatorium,  $\mathbf{P}$  = placement/lab course,  $\mathbf{R}$  = project,  $\mathbf{S}$  = seminar,  $\mathbf{T}$  = tutorial,  $\ddot{\mathbf{U}}$  = exercise,  $\mathbf{V}$  = lecture

Term: **SS** = summer semester, **WS** = winter semester

Methods of grading: **NUM** = numerical grade, **B**/**NB** = (not) successfully completed

Regulations: **(L)ASPO** = general academic and examination regulations (for teaching-degree programmes), **FSB** = subject-specific provisions, **SFB** = list of modules

Other: **A** = thesis, **LV** = course(s), **PL** = assessment(s), **TN** = participants, **VL** = prerequisite(s)

## Conventions

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

## Notes

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

### In accordance with

the general regulations governing the degree subject described in this module catalogue:

#### ASP02009

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

#### 01-Dec-2011 (2011-108)

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.

Conten	Its					
The firs	st part c	of the course will acqua	int students with the e	lementary building b	blocks of life as well	as biologi-
The first part of the course will acquaint students with the elementary building blocks of life as well as biologi- cal categories. Building on this knowledge, the course will then discuss the cell, the smallest unit of life, star- ting with its macroscopic structure before moving on to its microscopic structure. The course will point out dif- ferences and similarities between prokaryotic cells (bacteria, archaebacteria) and eukaryotic cells (animals, plants). The second part will address one of the central issues of biology: evolution. Fundamental mechanisms and hypotheses will be discussed and students will be introduced to major phylogenetic reconstruction me- thods. Using the examples of plants and animals, the subsequent module components will introduce students to the phylogenetic diversity of eukaryotes. At the level of groups in the plant and animal kingdoms, students will acquire the fundamental knowledge necessary to understand the forms and functions of animal and plant organisms, with morphology and cytology being discussed in an evolutionary and ecological context. The con- tents of the module are relevant for biological disciplines at all levels of biological organisation. <b>Intended learning outcomes</b> - Knowledge of the structures of prokaryotic and eukaryotic cells and their (biological) macromolecules Know- ledge of the specific characteristics of the intracellular and extracellular structures of prokaryotes as well as ani- mal and plant cells Ability to recognise evolution as the driving force behind the phylogeny of species Fami- liarity with the concepts of phylogenetic relationships between plants/animals Familiarity with the distinguis- hing characteristics and major representatives of groups in the plant and animal kingdoms Ability to select tho
