

Subdivided Module Catalogue for the Subject

Academic Speech Therapy

as a Bachelor's with 1 major with the degree "Bachelor of Science" (210 ECTS credits)

> Examination regulations version: 2014 Responsible: Faculty of Human Sciences Responsible: Institute of Special Education

Course of Studies - Contents and Objectives

There are no further admission requirements next to those described in ASPO §5 (1).

For successful studies, candidates are requested to enter into a contract with Caritas Vocational School of Logopaedics Wuerzburg (Caritas Berufsfachschule für Logopädie Würzburg), due to the dual and training-integrated concept of the programme. Admission to the vocational school requires medical fitness for the intended occupation and solid knowledge of the German language in speech and writing.

Well based educational knowledge in the theory of science and research methods as well as fundamental knowledge in the disciplines of medicine, psychology, linguistics, phonetics and therapeutic pedagogy and special education is acquired. Additionally students acquire specific knowledge in etiology, symptoms, differential diagnosis, diagnostics and speech and language therapy of different disorders.

Next to theoretical knowledge students acquire practical skills in the context of speech and language pathology at Caritas Vocational School of Logopaedics Wuerzburg.

Following the 6th semester, students pass the exam of logopaedics.

Students are requested to apply the theoretical and methodological knowledge they have acquired in their bachelor thesis.

Abbreviations used

Course types: $\mathbf{E} = \text{field trip}$, $\mathbf{K} = \text{colloquium}$, $\mathbf{O} = \text{conversatorium}$, $\mathbf{P} = \text{placement/lab course}$, $\mathbf{R} = \text{project}$, $\mathbf{S} = \text{seminar}$, $\mathbf{T} = \text{tutorial}$, $\ddot{\mathbf{U}} = \text{exercise}$, $\mathbf{V} = \text{lecture}$

Term: **SS** = summer semester, **WS** = winter semester

Methods of grading: **NUM** = numerical grade, **B/NB** = (not) successfully completed

Regulations: **(L)ASPO** = general academic and examination regulations (for teaching-degree programmes), **FSB** = subject-specific provisions, **SFB** = list of modules

Other: A = thesis, LV = course(s), PL = assessment(s), TN = participants, VL = prerequisite(s)

Conventions

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

Notes

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

In accordance with

the general regulations governing the degree subject described in this module catalogue:

ASP02009

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

10-Jul-2014 (2014-28)

12-Nov-2014 (2014-76)

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.

The subject is divided into

Communication theories, interaction and group dynamics, psychological basics of special educational counselling, elements of conversation techniques, counselling and cooperation, elements of conversation techniques when talking to people that have difficulties with verbal expression, collegial counselling and supervision, counselling concepts (e.g. cooperative, solution-oriented, psychology of learning, systemic ...), methods of cooperation, counselling in crisis situations, counselling in the course of education and life planning.

Intended learning outcomes

The students know basic aspects of human communication, conversation techniques, counselling and cooperation between the participants in the process of education and support, also especially regarding people that have difficulties with verbal expression. They acquire action and conversation competencies and are able to apply and observe conversation techniques, analyse conversation and counselling situations and develop proposals for continuation. They become acquainted with strategies to facilitate individual education and life planning and to overcome crisis situations of pedagogical importance.

Courses (type, number of weekly contact hours, language — if other than German)

V + S (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)

written examination (approx. 40 minutes)

Language of assessment: Usually German. However, the module lecturer(s) or thesis supervisor(s) and examination candidate(s) can also agree upon another language.

Conten	Contents					

Basic learning processes (theories and principles of human learning including cognitive learning processes); memory, knowledge acquisition (models of memory and requirements of memorising and knowledge building); thinking, problem solving (thinking processes and their principles, also during problem solving); instruction, quality of classes (specific measures and requirements of improving classes) / social interaction and communication (teacher-student and student-student interaction, intercultural learning); social structures and processes in small groups (school class, work group, teaching staff, family); social attitudes, social cognition and subjective theories in teachers and students as well as their modification); social conflicts and their resolution.

Intended learning outcomes

Advanced methodological knowledge gives the students a better understanding of psychological literature. Knowledge of Psychology of Learning, Memory, Thinking and Knowledge facilitates better teaching on the one hand and efficient help for better learning on the other hand. Advanced knowledge of Social Psychology improves the students' sympathy for pupils and their dependency on group, family and society; therefore, the students have the knowledge necessary for controlling social phenomena in class and for promoting a supportive social atmosphere in class.

to describe to dents e speech self-po le follor al-compet vation. compet and dis	Professional competence: The students advance their scientific practice skills and acquire different techniques to describe and discuss research contents according to the target group. Implementation competence: The students experiment with different forms of presentation and acquire the ability to develop a question relevant to speech therapy/logopaedics. They are able to independently analyse, organise and discuss a predetermined or self-posed question. After developing a question based on hypotheses, the students work on the answer while following a reasonable line of argument. They choose a clear description in line with scientific concepts. Social-communicative competence: The students acquire the ability to closely work on self-posed questions and test techniques of giving and taking feedback. They present and discuss the results in a scientific manner. Personal competence: The students work out strategies to work on the predetermined task and adopt a proper level motivation. Furthermore, they evaluate own strengths and weaknesses in a realistic manner and acquire the ability to compensate for their weaknesses. Reflection competence: The students understand the necessity of describing and discussing own scientific competencies in the context of their Bachelor's thesis. Contents						
Colored Discovering Inc. in a control of the Colored C						

Selected linguistic basics, especially from the fields of phonology, morphology, syntax, semantics and pragmatics. Neurolinguistic basics of models of speech production and processing as well as their neurological principles. Patholinguistic basics of the history of speech therapy/logopaedics in Germany and in the US; occupational-political classification of the various national and international speech therapeutic occupational groups; neighbouring fields of work of speech therapy/logopaedics; fields of treatment and clinical pictures of disordered communication in children and adults, language acquisition, overview of research on language acquisition, language processes and language knowledge in the context of healthy speech; research results of psycholinguistics relevant to speech therapy/logopaedics.

Intended learning outcomes

Professional competence: The students know basic linguistic concepts and are familiar with the neurolinguistic principles of models of speech production and processing as well as principles of patholinguistics. Implementation competence: The students are able to classify and evaluate linguistic symptoms and can incorporate them into the above-mentioned models. They know speech therapeutic fields of work and treatment as well as occupational groups. Social-communicative competence: The students succeed in giving a differentiated description of linguistic principles and of the terminology of patho- and neurolinguistics. Personal competence: Based on their professional knowledge of linguistic principles and of the terminology of patho- and neurolinguistics, the students show self-confidence in therapeutic interventions. Their self-confidence enables the students to further develop their therapeutic personality. Reflection competence: The students understand that the evaluation of own competencies is the foundation of an ICF-based therapy.

Contents

Elements and structure of singing and speech exercises, voice training in groups - concepts and methods, history and methods of functional voice training, advanced exercises on posture and tone regulation, respiration, phonation and articulation, transferring of own experiences of body, respiration and voice to job-related requirements, transferring of own experiences of body, respiration and voice to working with groups, theatre visit and accompanying conversation with a professional singer or actor about job-related requirements, language acquisition (first language acquisition, second-language acquisition), research on bi- and multilingualism, supporting factors and barriers of bilingual language acquisition, mechanisms of language mixing such as code-switching, interference, early childhood multilingualism, peculiarities of speech diagnostics for multilingual children, literacy acquisition in a multilingual context, aphasia and multilingualism in a therapeutic context

Intended learning outcomes

The students are able to differentiate and advance their own communication skills. They are able to carry out an independent analysis of familiar and unfamiliar physical, breathing, speech and vocal exercises. They are able to independently lead a voice training group. The students differentiate and advance acquired communication skills of their singing and speaking voice. The students are able to apply, analyse and alter unfamiliar physical, breathing and vocal exercises in order to meet the occupational requirements. The students acquire basic knowledge of the term multilingualism. They discuss current questions of the acquisition of bi- and multilingualism in a professional manner. They acquire basic knowledge of first and second-language acquisition. They know the typical mechanisms of language mixing and are able to properly describe the supporting factors and barriers of bilingual language acquisition. The students know the peculiarities of speech diagnostics in multilingual children and adults with an acquired brain damage and are able to independently apply, evaluate and interpret an appropriate diagnostics. The students evaluate questions of current research on bi- and multilingualism.

Contents

Swallowing disorders: Principles of the anatomy of swallowing and knowledge of the physiological process of swallowing, theoretical principles and in-depth study of causes, symptomatology and pathomechanisms of dysphagia, knowledge of disorders related to dysphagia, differentiation of medical and psychosocial criteria of prognosis, organisation, contents, carrying out and evaluation of an ICF-oriented anamnesis and a clinical diagnostics of dysphagia, importance of instrumental, medical diagnostic methods, documentation of research results and formulation of logopaedic reports and diagnoses including ICF-oriented therapy goals, planning, carrying out, documentation and evaluation of an ICF-oriented and evidence-based therapy, integration of knowledge of the effects of common concomitant disorders and the importance of interdisciplinary work for diagnostics and therapy, knowledge of the goals, contents and application of different therapeutic concepts, the importance of medical measures (feeding tubes, tracheal cannula, etc.) for logopaedic work, carrying out of consultations with patients, relatives and co-workers of the interdisciplinary team, practical exercises in the fields of anamnesis, diagnostics, therapy and consultation, laryngectomy, knowledge of pre- and postoperative anatomical-physiological circumstances and the psychosocial situation, knowledge of possible complications or concomitant disorders after surgery, radiation therapy and chemotherapy, differentiation between medical and psychosocial criteria of prognosis, organisation, contents, carrying out and evaluation of an ICF-oriented anamnesis and of a clinical diagnostics of laryngectomy, planning of an ICF-oriented and evidence-based therapy depending on the surgical method as well as anatomical, patient-related and postoperative conditions, knowledge of special communication possibilities and their advantages and disadvantages, overview and in-depth study of therapeutic methods, knowledge of the necessity of pre- and postoperative consultation and care for patients and relatives, importance and handling of special sanitary, nursing and technical equipment

Intended learning outcomes

Professional competence: The students know the theoretical principles of causes, symptomatology, diagnostics, therapy and consultation for dysphagia and laryngectomy. They are familiar with the goals and contents of various therapy methods and know the importance of interdisciplinary cooperation. Implementation competence: They are able to plan, conduct, evaluate and document disorder-specific diagnostics as well as ICF-oriented therapy. Social-communicative competence: They know the principles of conversation techniques for a target-oriented anamnesis. The students are familiar with planning and holding consultations with patients, relatives and colleagues in interdisciplinary teams. Personal competence: The students should have and advance basic therapeutic competencies. Reflection competence: The students individually learn to evaluate their own diagnostic and therapeutic competencies.

Contents

Theoretical principles and in-depth study of causes, symptomatology and classification of aphasia, apraxia of speech and dysarthrophonia in due consideration of neurological, anatomical, functional and linguistic aspects, differentiation of other communicative and vocal impairments, differentiation of medical and psychosocial criteria of prognosis, knowledge of the effects of common concomitant disorders and the importance of interdisciplinary work for diagnostics, organisation, contents and carrying out of an ICF-oriented anamnesis of the afore-mentioned clinical pictures, organisation, contents and evaluation criteria of common standardised diagnostic methods for the afore-mentioned clinical pictures, methods of selecting, planning, executing, evaluating and interpreting diagnostic methods, documentation of findings, formulation of a logopaedic report and diagnosis including ICF-oriented therapy goals, practical exercises in the fields of anamnesis and diagnostics.

Intended learning outcomes

Professional competence: The students are able to describe the theoretical principles of the causes, symptomatology and classification of aphasia, verbal apraxia and dysarthrophonia whilst taking into account neurological, anatomical, functional and linguistic aspects. Implementation competence: They are able to plan, conduct, evaluate and document disorder-specific diagnostics. The students know the basics of planning and documenting an ICF-oriented therapy. Social-communicative competence: They know the principles of conversation techniques for a target-oriented anamnesis. Personal competence: The students should have and advance basic therapeutic competencies. Reflection competence: The students individually learn to evaluate their own diagnostic competencies.

Contents					

Planning, implementation, documentation and evaluation of an ICF-oriented and evidence-based therapy for the clinical pictures aphasia, apraxia of speech and dysarthrophonia, integration of knowledge of requirements, goals, methods and means of a logopaedic therapy for the afore-mentioned clinical pictures, integration of knowledge of the effects of common concomitant disorders and the importance of interdisciplinary work for therapy, importance and possibilities of group therapy, therapeutic appliances and the use of computers, carrying out of disorder-specific consultations with patients, relatives and co-workers of the interdisciplinary team, practical exercises in the field of therapy and consultation

Intended learning outcomes

Professional competence: The students know how to select and evaluate disorder-specific test methods for the clinical pictures of aphasia, apraxia of speech and dysarthrophonia and know the principles and goals of therapy methods. Implementation competence: They are able to plan, conduct, evaluate and document disorder-specific diagnostics as well as ICF-oriented therapy. Social-communicative competence: They know the principles of conversation techniques for a target-oriented anamnesis. The students are familiar with planning and holding consultations with patients, relatives and colleagues in interdisciplinary teams. Personal competence: The students should have and advance basic therapeutic competencies. Reflection competence: The students individually learn to evaluate their own diagnostic and therapeutic competencies.

					ogy and pathophysiology, acou- cs of orthodontics and jaw surge-	

Intended learning outcomes

ry.

Self- and social competence: The students concentrate on studying contents of the medical (sub-)disciplines ENT medicine and audiology. Methodological competence: The students methodically acquire professional knowledge of the above mentioned disciplines and critically evaluate these disciplines in view of their relevance for speech therapy/logopaedics. Subject and professional competence: The students have basic knowledge of physical acoustics and the principal psychoacoustic parameters. They become acquainted with methods of acoumetry and learn how to analyse and interpret the results. By learning about the function and adjustment of hearing aids, they are enabled to give advice to children and adults with impaired hearing. Furthermore, the participants of the seminar have acquired professional knowledge of the relevance and problems of speech therapy measures in the field of auditory rehabilitation. They acquire additional competencies in the field of orthodontics and jaw surgery which are necessary for assessing and identifying craniosynostosis and other craniofacial anomalies. Definition, classification according to aetiologic aspects, aetiopathogenesis, general symptomatology, symptomatology of isolated/syndromic craniosynostosis, surgical therapy, active remodelling techniques, timing of surgery, fronto-orbital advancement.

Conten	ıts				

Child and adolescent psychiatry: Principles and fundamental questions of child and adolescent psychiatry, e.g.: Psychotherapy, psychopharmacotherapy, ADHD, tic disorder, conduct disorder and addiction, depression and bipolar disorders, suicide, attempted suicide and self-injuring behaviour, personality disorders, dyslexia, dyscalculia, speech and motor development disorders, eating disorders, compulsion, anxiety disorders, dissociative and somatoform disorders, posttraumatic stress disorder, acute stress disorder, adaptive disorder, autism, mental disabilities, epilepsy and organic brain syndrome, psychoses, elimination disorders, sexual abuse and assessment of credibility, deprivation, attachment disorders. Psychiatry and psychosomatics: Basic terms of psychopathology, psychometrics and neuropsychology, schizophrenic psychoses, bipolar affective and depressive disorders, suicidal tendency, anxiety and obsessive-compulsive disorders, somatoform disorders, dissociative disorders, eating disorders, addiction and dependency disorders

Intended learning outcomes

Psychiatry and psychosomatics: The students know basic psychopathological terms as well as psychiatric and psychosomatic clinical pictures which can influence speech production, speech processing and speech comprehension. They have basic knowledge of test-psychological techniques as auxiliary diagnostic tools for the respective disorders. Child and adolescent psychiatry: The students have basic knowledge of common childhood and adolescent psychiatric clinical pictures: Symptomatology, aetiology, diagnostics and therapy. Basic knowledge of emergencies in child and adolescent psychiatry. Knowledge of behaviour therapy techniques and psychopharmacology.

Duratio	n	Module level	Other prerequisites			
1 seme	ster	undergraduate	Practical classes: practice of speech therapy, sitting in on thera		rapy, sitting in on therapy sessi-	
			ons.			

The knowledge acquired in the theoretical and practical classes enables the students to carry out anamnesis and consultations, establish diagnoses and plan, organise, evaluate and document the therapy process. Patient-specific work: treatment, preparation and follow-up, monitoring and co-treatment. Carrying out of anamnesis, conversation techniques, written planning and documentation of logopaedic treatment.

Intended learning outcomes

Professional competence: The students plan and conduct therapeutic interventions and evaluate their effectiveness in view of ICF. They document their plans and results in written form. Implementation competence: The students successfully conduct a flexible logopaedic therapy. They determine the duration and prioritisation of individual practice areas in accordance with the patient's needs. They are able to provide individual and target-oriented assistance. If necessary, the students show model behaviour and apply different forms of feedback in a differentiated manner. Social-communicative competence: During therapy, the students adjust their verbal and non-verbal behaviour to the patient and disorder. They apply different conversation techniques. They show empathy. They maintain efficient contact with patients and relatives. Personal competence: The students' contact with patients becomes increasingly professional and they realise how their own personality plays an important role in the therapeutic process. They succeed in keeping an appropriate balance between closeness and distance in their relations with patients and relatives. The students develop self-confidence by becoming aware of their own strengths and weaknesses. Reflection competence: The students evaluate their own role as a therapist and the effectiveness of therapy. They analyse the effectiveness of their methodological and didactic means in an ICF-oriented way. They evaluate their own conversational behaviour and interpret the reactions of their counterpart. They include patients, relatives and the interdisciplinary team in the logopaedic therapy in a process-oriented manner.

Work placement 3 The knowledge acquired in the theoretical and practical classes enables the students to carry out anamnesis and consultations, establish diagnoses and plan, organise, evaluate and document the therapy process. Patient-specific work: treatment, preparation and follow-up, monitoring and co-treatment. Carrying out of anamnesis, conversation techniques, written planning and documentation of logopaedic treatment, music therapy: Theory of music therapy (MT), definition, term definitions, active and receptive MT, occupational fields of music therapists, setting, practice of musicotherapeutic interventions based on the case presentations of the students and further exemplary cases (clients: neurologically ill patients from the work placement): using musical instruments, using the voice (vocal improvisation, song), self-experience, developing therapist personality traits, enhancing the skills and means of the therapist, reflection/modification of personal requirements for carrying out logopaedic therapies, reflection/modification of important aspects of experience and action in a therapeutic context, paediatric audiology/speech therapy: Consultation: Voice/speech/swallowing in adults and children CHC (Comprehensive Hearing Center) I: paediatric-audiological consultation for children with impaired hearing: 1 Patient tour: CI (cochlear implant) technique, electrophysiology, audiometry CHC II: CI consultation ENT, neonatal hearing screening, tumour consultation

Intended learning outcomes

Professional competence: The students plan and conduct therapeutic interventions and evaluate their effectiveness in view of ICF. They document their plans and results in written form. Implementation competence: The students successfully conduct a flexible logopaedic therapy. They determine the duration and prioritisation of individual practice areas in accordance with the patient's needs. They are able to provide individual and target-oriented assistance. If necessary, the students show model behaviour and apply different forms of feedback in a differentiated manner. Social-communicative competence: During therapy, the students adjust their verbal and non-verbal behaviour to the patient and disorder. They apply different conversation techniques. They show empathy. They maintain efficient contact with patients and relatives. Personal competence: The students' contact with patients becomes increasingly professional and they realise how their own personality plays an important role in the therapeutic process. They succeed in keeping an appropriate balance between closeness and distance in their relations with patients and relatives. The students develop self-confidence by becoming aware of their own strengths and weaknesses. Reflection competence: The students evaluate their own role as a therapist and the effectiveness of therapy. They analyse the effectiveness of their methodological and didactic means in an ICF-oriented way. They evaluate their own conversational behaviour and interpret the reactions of their counterpart. They include patients, relatives and the interdisciplinary team in the logopaedic therapy in a process-oriented manner.

Courses (type, number of weekly contact hours, language — if other than German)

tion as examin student tion sperent con	Professional competence: The students have knowledge of prenatal and early postnatal development, especially of pre-linguistic and early linguistic development. They know the technical principles of early language intervention as well as the corresponding framework conditions. Methodological competence: The students can critically examine scientific studies on pre-linguistic and early linguistic development. Implementation competence: The students are able to identify anomalies in pre-linguistic/early linguistic development and can plan early intervention speech therapy. Social-communicative competence: The students can apply principles of case-oriented parent counselling and interdisciplinary agreement. Personal competence: The students should have and advance basic competencies in dealing with parents and experts from other disciplines in the field of early intervention.
