Subdivided Module Catalogue
for the Subject
Biochemistry
as a Master’s with 1 major
with the degree "Master of Science"
(120 ECTS credits)

Examination regulations version: 2015
Responsible: Faculty of Chemistry and Pharmacy
Course of Studies - Contents and Objectives

The Faculty of Chemistry and Pharmacy and the Faculty of Medicine of the JMU offer the study program "Biochemistry" with the degree "Master of Science" (acquisition of 120 ECTS credits) as part of a consecutive Bachelor and Master program. The study program is assigned to the profile type "rather research-oriented". The degree "Master of Science" is further qualifying for a vocational or research-oriented career. The qualification acquired during the Master degree program corresponds to that of a Diploma in Biochemistry (University).

The biochemistry study program prepares for a scientific profession in the field of biochemistry and for an academic career in a Ph.D. program. The aim of the training is to provide students with in-depth knowledge of scientific practice in research and application of biochemistry and its fundamental principles. By educating and training of analytical thinking, the student acquires the ability to familiarize himself/herself later on with the manifold tasks assigned to him/her and, in particular, to independently apply the basic knowledge acquired in the consecutive bachelor's and master's degree program and transfer it to new problems.

Through the final thesis, the students show their capability to deal with a biochemical problem in a thematically and temporally limited extent, especially by applying known methods or by modifying the same, from a scientific point of view. The Master's exam ascertains that the candidate has a good understanding of the correlations in biochemistry and the ability to apply the acquired scientific methodology independently. It leads to the acquisition of an internationally comparable degree in the field of biochemistry and represents a further vocational or research-oriented degree.

The successfully completed Master exam entitles the graduate to commence a doctoral degree program in accordance with the relevant doctoral degree program regulations of the JMU in their valid versions.
Abbreviations used

Course types: \( E = \) field trip, \( K = \) colloquium, \( O = \) conversatorium, \( P = \) placement/lab course, \( R = \) project, \( S = \) seminar, \( T = \) tutorial, \( Ü = \) exercise, \( V = \) lecture

Term: \( SS = \) summer semester, \( WS = \) winter semester

Methods of grading: \( \text{NUM} = \) numerical grade, \( \text{B/NB} = \) (not) successfully completed

Regulations: \( \text{(L)ASPO} = \) general academic and examination regulations (for teaching-degree programmes), \( \text{FSB} = \) subject-specific provisions, \( \text{SFB} = \) list of modules

Other: \( A = \) thesis, \( LV = \) course(s), \( PL = \) assessment(s), \( TN = \) participants, \( VL = \) prerequisite(s)

Conventions

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

Notes

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

In accordance with

the general regulations governing the degree subject described in this module catalogue:

\( \text{ASPO2015} \)

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

\( \text{13-Jul-2015 (2015-20) except for mandatory elective 03-MBC-TG-161 added at two places in Fast Track procedure at a later time} \)

\( \text{15-Mar-2017 (2017-14)} \)

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.

Module title
Biophysics and Molecular Biotechnology

Abbreviation
07-MS2BT-152-m01

Module coordinator
holder of the Chair of Biotechnology and Biophysics

Module offered by
Faculty of Biology

ECTS
10

Method of grading
numerical grade

Duration
1 semester

Module level
graduate

Other prerequisites
--

Contents
This lecture provides a broad overview of biophysical techniques and their applications. The first part of the lecture discusses fundamental aspects of thermodynamics, kinetics and molecular interactions. The course then moves on to discuss biophysical methods that facilitate the investigation of individual cells down to the level of single molecules. Focus is on electromanipulation and dielectric spectroscopy of cells, biomembranes, electrophysiology, ion channels, protein folding, single-molecule fluorescence methods and high-resolution as well as dynamic microscopy.

Intended learning outcomes
Students will have acquired a knowledge of fundamental biophysical methods and their applications that will enable them to independently review relevant literature. In addition, they will have become acquainted with - or, where necessary, will be able to independently acquaint themselves with - biophysical mechanisms.

Courses
(V (2) + S (1))
Module taught in: English

Method of assessment
Students will be informed about the method, length and scope of the assessment prior to the course. Usually, one of the following options will be chosen: a) written examination (30 to 60 minutes, including multiple choice questions) or b) oral examination of one candidate each (30 to 60 minutes) or c) oral examination in groups of up to 3 candidates (30 to 60 minutes)
Language of assessment: German and/or English

Contents

Advances and current results of bioinformatics are explained and discussed, this includes results from genome and sequence analysis, protein domains and protein families, large-scale data analysis (e. g. net generation sequences, proteomics data), analysis of different functional RNAs (e. g. miRNAs, IncRNAs).

Intended learning outcomes

Understand recent results in bioinformatics. Discuss their implications. Have an advanced (Master) level knowledge of typical technologies and research questions in bioinformatics.

Courses (type, number of weekly contact hours, language — if other than German)

V (2) + S (1)
Module taught in: German and/or English

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)

Students will be informed about the method, length and scope of the assessment prior to the course. Usually, one of the following options will be chosen: a) written examination (30 to 60 minutes, including multiple choice questions) or b) oral examination of one candidate each (30 to 60 minutes) or c) oral examination in groups of up to 3 candidates (30 to 60 minutes)

Module title  Clinical Neurobiology
Abbreviation  03-98-MVKN-152-m01

Module coordinator  holder of the Chair of Clinical Neurobiology
Module offered by  Faculty of Medicine

ECTS  5
Method of grading  numerical grade
Only after succ. compl. of module(s)  --

Duration  1 semester
Module level  graduate
Other prerequisites  --

Contents
Students will get a theoretical introduction to neurobiology and clinical neurobiology. The following topics will be discussed: introduction to neurons and glia, ion channels and membrane potential, ion channelopathies, synapses, transmitter release, NMJ, myasthenia gravis, cerebellum, basal ganglia, ataxia and Morbus Parkinson, somatosensory system, touch, pain, schizophrenia and autism spectrum disorders, disorders of cognition, muscle and muscle diseases, anatomy and function of the motor system, spinal reflexes, motoneuron diseases, hippocampus, learning and memory, anterograde amnesia, visual agnosia, cortex and the limbic system, emotions, disorders of conscious and unconscious mental processes, attention, smell and taste and hearing, sleep, EEG, epilepsy, vision and diseases of the visual system. The literature seminars are based on fundamental literature on lecture-relevant topics to document the experiments underlying our present knowledge in neurobiology.

Intended learning outcomes
Students who successfully completed this module will have acquired insights into current theoretical concepts in neurobiology. They will have examined clinical aspects of neurobiology with a focus on the molecular, cellular and physiological mechanisms. Additionally, they will have learned how to evaluate and present data in oral form. The students will have learned to critically read scientific publications in the field of neurobiology and will have been trained in the ability to extract relevant information from the original literature.

Courses (type, number of weekly contact hours, language — if other than German)

**Contents**

Cell culture techniques, fundamentals of tissue engineering, test systems as an alternative to animal experiments in skin, intestine, lung, trachea, kidney, blood-brain barrier, tumours and other diseases, development of cell-based transplants, regulatory fundamentals for approval of medical products and drugs. These are REACH (registration, evaluation, restriction and approval of drugs), medicine products law, GLP (good lab practice), GMP (good manufacturing practice), GCP (good clinical practice).

**Intended learning outcomes**

Students have developed a knowledge of cell biology, metabolism, differentiation, adhesion to surfaces, mechanobiology. They are familiar with the fundamental principles of tissue engineering and quality management.

**Courses** (type, number of weekly contact hours, language — if other than German)

Contents

In the module "Klinische Onkologie" ("Clinical Oncology"), various clinicians will present a current view of the disease "cancer". Topics will include an overview of different tumour entities (including cancers of the blood, skin, breast, lung, liver, colon, endocrine system), treatment modalities (e. g. immunotherapy, radiation-based therapy, personalised medicine), diagnostics, pathology, clinical studies.

Intended learning outcomes

An understanding of the biological commonalities and particularities of different tumour types. An understanding of the needs, possibilities and limitations of clinical approaches.

Courses (type, number of weekly contact hours, language — if other than German)

**Duration**  
1 semester

**Module level**  
graduate

**Other prerequisites**  
--

**Contents**

The module "Mass Spectrometry and Proteomics" includes a lecture, which teaches the basics of mass spectrometry of biomolecules. There, inter alia, the gentle ionization ESI and MALDI, and the functional principles of different mass analyzers such as TOF and Orbitrap are discussed. The lecture part gives an introduction to the mass spectrometric fragmentation techniques CID and ETD, to separation techniques for peptides and proteins, as well as to the analysis of mass spectrometric data (protein databases, FDR, GO terms, etc.). Furthermore, an overview of the field of quantitative proteomics is given; especially different methods of quantification by stable isotopes (SILAC, N15-Labeling, iTRAQ, etc.) will be discussed. Finally, the lecture gives insights into the mass spectrometric analysis of post translational modifications. The seminar part of the module imparts fundamentals of mass spectrometric analysis data. To this end, the participants will be introduced to different software packages and then work independently on exemplary data sets to find solutions for different tasks. In the practical part of the module, participants will isolate a protein complex from yeast by affinity purification. This complex is separated by 1D-SDS-PAGE and proteolytically cleaved in the gel. The peptides obtained are analyzed by nanoLC-MS / MS. Finally data analysis is conducted with the aim of identifying specific interaction partners and post-translational modifications.

**Intended learning outcomes**

On a broad basis, participants are taught the theoretical foundations of mass spectrometric analysis of proteins and proteomes. In the seminar, participants learn how to use data analysis software in the field of proteomics. In the practical part, students will learn affinity purification of a protein complex, and typical steps of sample preparation for mass spectrometric protein analysis, such as SDS-PAGE and in-gel digestion. Participants get an insight into the operation of a nanoHPLC-coupled mass spectrometer.

**Courses**  
(type, number of weekly contact hours, language — if other than German)

V (2) + S (1) + P (2)

Module taught in: German or English

**Method of assessment**  
(type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)

**Contents**

This module will discuss current topics in human genetics.

**Intended learning outcomes**

Students have developed the ability to understand relevant questions in human genetics and to discuss these in detail.

**Courses** (type, number of weekly contact hours, language — if other than German)

V (2) + S (2)

Module taught in: German or English

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)

a) written examination (approx. 45 to 90 minutes) or b) oral examination of one candidate each (20 to 30 minutes) or c) oral examination in groups of up to 3 candidates (15 to 30 minutes per candidate)

Language of assessment: German and/or English

**Allocation of places**

### Contents

Foundations and analytical approaches of bacterial genetics are taught based on selected questions from molecular microbiology. Genetic processes are analysed with the help of examples of gene transfer. Molecular genetic and functional biochemical pathways are presented using examples from microbiology.

### Intended learning outcomes

Students have developed the ability to approach, analyse and interpret general problems in bacterial genetics based on individually assigned tasks, using techniques of modern molecular biology, microbiology and genetics. They also have developed skills in experimental design, bench work, data analysis and the presentation of scientific results both orally and in writing.

### Courses

(type, number of weekly contact hours, language — if other than German)

V (1) + S (1) + Ü (4)

### Method of assessment

(type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)

a) written examination (approx. 45 to 90 minutes) or b) log (20 to 30 pages) or c) oral examination of one candidate each (20 to 30 minutes) or d) oral examination in groups of up to 3 candidates (15 to 30 minutes per candidate) or e) presentation (20 to 40 minutes)

Language of assessment: German and/or English

### Allocation of places

Biochemie (Biochemistry), Master's: 4 places. Places will be allocated according to the number of subject semesters. Among applicants with the same number of subject semesters, places will be allocated by lot. A waiting list will be maintained and places re-allocated by lot as they become available.

### Additional information

--

### Referred to in LPO I

### Module title
**Immunology 1**

### Abbreviation
03-MS2IM1-152-m01

### Module coordinator
holder of the Professorship of Immunogenetics

### Module offered by
Faculty of Medicine

### ECTS
10

### Method of grading
numerical grade

### Only after succ. compl. of module(s)
--

### Duration
1 semester

### Module level
graduate

### Other prerequisites
--

### Contents
Familiarity with the fundamentals of molecular and cellular immunology that allow a deeper understanding of immune-mediated defence mechanisms. This incorporates common literature readings, presentations and tests on selected immunology book chapters and recent original literature in English language.

### Intended learning outcomes
Students will gain a knowledge of fundamental concepts and methods in molecular and cellular immunology and will be able to present and discuss these.

### Courses (type, number of weekly contact hours, language — if other than German)

V (1) + S (2)

Module taught in: English

### Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)

a) written examination (approx. 45 to 90 minutes) or b) log (20 to 30 pages) or c) oral examination of one candidate each (20 to 30 minutes) or d) oral examination in groups of up to 3 candidates (15 to 30 minutes per candidate) or e) presentation (20 to 40 minutes)

Assessment offered: Once a year, winter semester

Language of assessment: German and/or English

### Allocation of places
Biochemie (Biochemistry), Master's: 3 places. Places will be allocated according to the number of subject semesters. Among applicants with the same number of subject semesters, places will be allocated by lot. A waiting list will be maintained and places re-allocated by lot as they become available.

**Contents**

Recent progress in molecular and cellular immunology. Deeper insights into selected immunology chapters, such as autoimmunity and immune modulation, development of the immune system, immunogenetics, evolution, infection immunology, and more. This incorporates common literature readings, presentations and tests on selected immunology book chapters and recent original literature.

**Intended learning outcomes**

Students are able to understand current problems in immunology and to discuss these in detail.

Module title: Microbiology 1
Abbreviation: 07-MS2M1-152-m01

Module coordinator: holder of the Chair of Microbiology
Module offered by: Faculty of Biology

ECTS: 10
Method of grading: numerical grade
Only after succ. compl. of module(s)

Duration: 1 semester
Module level: graduate
Other prerequisites:

Contents
Fundamentals of molecular microbiology and infection biology, mechanisms of adherence and invasion, bacterial pathogenicity factors, regulation of virulence, mechanisms of host defence and pathogen interference, current methods in infection biology.

Intended learning outcomes
The students are able to understand fundamental theories of molecular microbiology and infection biology, emergence of infectious diseases.

Courses (type, number of weekly contact hours, language — if other than German)
V (2) + S (1)

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)
a) written examination (approx. 45 to 90 minutes) or b) oral examination of one candidate each (20 to 30 minutes) or c) oral examination in groups of up to 3 candidates (15 to 30 minutes per candidate)
Language of assessment: German and/or English

Allocation of places
Biochemie (Biochemistry), Master's: 15 places. Places will be allocated according to the number of subject semesters. Among applicants with the same number of subject semesters, places will be allocated by lot. A waiting list will be maintained and places re-allocated by lot as they become available.

### Contents

The module allows to participate in an excursion with a thematic scope and relation to the selected major field of study. It represents a special subject-related expansion of scientific knowledge. The excursion may be offered internally or externally of the University of Würzburg. Recognition as academic achievement is conducted in an individual assessment by the examination board.

### Intended learning outcomes

The student has improved scientific knowledge, which contributes to the sharpening of specific qualifications. In particular, he/she gained additional expertise that contributes to individual specialization.

### Contents

The module allows to participate in an excursion with a thematic scope and relation to the selected major field of study. It represents a special subject-related expansion of scientific knowledge. The excursion may be offered internally or externally of the University of Würzburg. Recognition as academic achievement is conducted in an individual assessment by the examination board.

### Intended learning outcomes

The student has improved scientific knowledge, which contributes to the sharpening of specific qualifications. In particular, he/she gained additional expertise that contributes to individual specialization.

### Courses (type, number of weekly contact hours, language — if other than German)

<td>(1)</td>
<td>German or English</td>
</tr>
</tbody>
</table>

### Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)

- a) written examination (approx. 45 to 90 minutes) or
- b) log (20 to 30 pages) or
- c) oral examination of one candidate each (20 to 30 minutes) or
- d) oral examination in groups of up to 3 candidates (15 to 30 minutes per candidate) or
- e) presentation (20 to 40 minutes)

Language of assessment: German and/or English

**Contents**

The module allows participation in a national or international congress with a thematic scope and relation to the selected major field of study, combined with the presentation of own scientific data in a poster session. Recognition as academic achievement is conducted in an individual assessment by the examination board.

**Intended learning outcomes**

The student gains a widened overview of the latest findings and developments in the field. He/She has the possibility to meet other scientists in his/her specialism. He/She trains his/her skills, to critically scrutinise the own work, to present it to a professional audience and to defend it against criticism.

**Contents**

Participants of the module read predetermined papers from a specific subject area of life sciences related to biochemistry. In a rotation mode each participant presents these publications in plenary sessions, followed by a critical discussion of the content presented. The suitability (regarding subject and level) of a given literature seminar has to be clarified with the module coordinator in advance.

**Intended learning outcomes**

The students train their abilities in reading and critical questioning current literature of the life sciences with relation to the biochemistry. They improve their skills in presenting and arguing of scientific contents.

**Contents**

The module enables the processing of a defined problem within a specified period by applying the scientific methods learned in the course of study.

**Intended learning outcomes**

The student can familiarize oneself on the basis of scientific literature with the current state of research on a given topic. He/She has the ability to process a defined problem / issue using scientific methods and to document the results, to analyse and to interpret them, and to integrate them into the context of the literature in a written thesis.

**Contents**

The module "Macromolecular Crystallography" consists of lectures, exercises and a practical course. The lecture series covers the following topics: Biophysical characterization of protein samples prior to crystallization; crystallization by various techniques, either by manual or high throughput operation; properties and production of X-rays and their production by means of X-ray generators and synchrotron sources; data collection with various detector systems; symmetry properties of molecules, point groups and space groups; description of the phase problem and solving this problem by means of multiple isomorphous replacement, anomalous diffraction and molecular replacement; improving experimentally determined phases by solvent flattening and molecular averaging; manual and automatic model building; refinement procedures and analysis of experimentally determined structures. In the exercises the topics covered in the lectures will be recapitulated with the help of problem sets.

In the practical course, the students will carry out all steps discussed in the lecture series, which are necessary for the determination of a protein structure using lysozyme as an example; starting with the crystallization of the purified protein, data collection using the in-house diffractometer, the solution of the phase problem on the basis of the anomalous signal of the intrinsic sulfur atoms, model building, structure refinement and, finally, the analysis of the refined structure.

**Intended learning outcomes**

Participants will acquire extensive knowledge in modern macromolecular crystallographic methods. The basics of the method are presented in great depth in the lectures, the intellectually most demanding aspects are reiterated in the exercises and the practical approach will be explained in detail in the practical course. Participants are thus put in a position to be able to take on a crystallographic structure analysis as part of their master's or PhD studies.

Contents

In the practical course “Tumorbiologie-Praktikum” (“Experimental Tumour Biology”), students learn about various model systems (tissue culture and animal models) and experimental approaches in cancer research (e.g. flow cytometry, tissue staining & microscopy, quantitative expression analysis, metabolic analyses). Prior (or concurrent) attendance of the lecture "Molekulare Onkologie" (“Molecular Oncology”) and the course "Seminare in Onkologie" (“Seminars in Oncology”) 1 or 2 is required.

Intended learning outcomes

Knowledge of selected tumour models and techniques for experimental tumour research. Ability to read and understand relevant primary literature.

Courses (type, number of weekly contact hours, language — if other than German)

P (8)

Module taught in: German or English

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)

Log (20 to 30 pages) or presentation (20 to 40 minutes)

Language of assessment: German and/or English

Allocation of places

Biochemie (Biochemistry), Master’s: 18 places. Places will be allocated according to the number of subject semesters. Among applicants with the same number of subject semesters, places will be allocated by lot. A waiting list will be maintained and places re-allocated by lot as they become available.

**Contents**

The module offers the possibility to learn the organization, training and responsible leadership of scientific experiments by assisting undergraduate students in a practical course.

**Intended learning outcomes**

The student is able to train and to supervise undergraduate students in basic experimental procedures.

**Courses** (type, number of weekly contact hours, language — if other than German)

No courses assigned to module

**Method of assessment** (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)

Preparing and supervising student lab courses: assessment to be successfully completed (type and length of assessment to be specified at the beginning of the course)

Language of assessment: German or English

**Allocation of places**

--

**Additional information**

--

**Referred to in LPO I** (examination regulations for teaching-degree programmes)

Module title: Practical lab course 1
Abbreviation: 08-MBC-LP1-152-m01

Module coordinator: Chairperson of examination committee Biochemie (Biochemistry)
Module offered by: Chair of Biochemistry

ECTS: 15
Method of grading: Only after successfully completed module(s)

Duration: 15 (not) successfully completed
Module level: Graduate
Other prerequisites: --

Contents:
The lab course is carried out in a working group with biochemical and/or molecular biology research orientation at the University of Würzburg. The contents of the lab course have to be defined in advance in consultation with the module responsible. The lab course allows intensive training in biochemistry, molecular biology and/or bioinformatics research methods. The experiments and their results are documented in a written protocol.

Intended learning outcomes:
After attending the lab course, the student has advanced methodological knowledge. He/She is able to transfer the methods used in this course on other issues and to assess their applicability. He/She masters the scientifically correct documentation and discussion of experimentation and results.

Courses:
No courses assigned to module

Method of assessment:
(a) log (approx. 20 pages) or (b) oral examination of one candidate each (approx. 20 minutes) or (c) oral examination in groups (groups of 2: approx. 30 minutes, groups of 3: approx. 40 minutes) or (d) presentation/talk (approx. 15 to 30 minutes)

Language of assessment: German or English

**Contents**

The internship is carried out at universities abroad and can be embedded within offered study programs (e.g., Erasmus). The content requirements should comply with those of the electives of the Biochemistry Master program at the University of Würzburg (what has to be ascertained in advance under discussion with the module coordinator).

**Intended learning outcomes**

The students are familiar with working methods at universities abroad. Besides professional competences they have also acquired language and social skills.

**Contents**

The internship is carried out in a non-university research / diagnostic institution or in a company. The contents of the internship will be determined by the institution. The content requirements shall correspond to an internship offered in the study program of the Biochemistry Master program at the University of Würzburg, what has to be defined in advance in consultation with the module coordinator.

**Intended learning outcomes**

Students are acquainted with the structures of non-university institutions and possess specific professional skills.

<td></td>
</tr>
</tbody>
</table>

**Module coordinator**
holder of the Professorship Human Genetics at Institute for Human Genetics

**Institute of Human Genetics**

**Duration**
1 semester

**Module level**
graduate

### Contents
Basics on human genetics (inheritance patterns, mutation types, etc.), hereditary cancer (breast & ovarian cancer, HNPCC, FAP, etc.), cancer syndromes, tumor cytogenetics, epigenetics in cancer, animal models in cancer genetics, genetic techniques (NGS, genome engineering, etc.)

### Intended learning outcomes
The students have acquired broad knowledge in the field of tumor genetics and hereditary tumor diseases as well as specific knowledge about genetic methods. They are able to apply this acquired knowledge to scientific questions in tumor genetics. Students can independently develop scientific texts, discuss them critically and present them.

### Courses
(V (1) + S (1)
Module taught in: English

### Method of assessment
a) written examination (approx. 45 to 90 minutes) or b) log (20 to 30 pages) or c) oral examination of one candidate each (20 to 30 minutes) or d) oral examination in groups of up to 3 candidates (15 to 30 minutes per candidate) or e) presentation (20 to 40 minutes)
Language of assessment: German and/or English
