

Subdivided Module Catalogue
for the Subject

Food Chemistry

as a Master's with 1 major
with the degree "Master of Science"
(120 ECTS credits)

Examination regulations version: 2016
Responsible: Faculty of Chemistry and Pharmacy
Responsible: Institute of Pharmacy and Food Chemistry

Learning Outcomes

German contents and learning outcome available but not translated yet.

Wissenschaftliche Befähigung

- Die Absolventinnen und Absolventen können zum Lösen einer wissenschaftlichen Fragestellung relevante Analyten in Lebensmitteln, Kosmetika, Bedarfsgegenständen, Umwelt und Futtermitteln auswählen und anhand der von ihnen ermittelten validen Analysenergebnisse korrekt die Identität, Qualität und Sicherheit von Lebensmitteln bewerten. Falls nicht vorhanden, entwickeln und validieren sie die hierzu benötigten instrumentellen sowie zell- und molekularbiologischen, quantitativen Methoden.
- Für die Auswahl relevanter Analyten besitzen die Absolventinnen und Absolventen vertiefte theoretische und praktische Kenntnisse aus den Bereichen Bio- und Umweltchemie, Lebensmittel- und Umwelttoxikologie, Lebensmittelrecht sowie der Chemie und Technologie der Lebensmittel, Kosmetika, Bedarfsgegenstände und Futtermittel. Diese eignen sie sich in den Lehrveranstaltungen der entsprechenden Module an und weisen ihr Wissen mit dem Bestehen der dazu gehörigen Klausuren und mündlichen Prüfungen nach.
- Das Entscheidungsvermögen der Absolventinnen und Absolventen, ob bestehende Methoden hinsichtlich ihrer Eignung für die Bestimmung der Analyten optimiert, weiter- oder neu entwickelt werden müssen, basiert zum einen auf ihrer Kenntnis der möglichen Methoden und ihrem Verständnis derer chemischen und physikalischen Prinzipien. Zum anderen verfügen sie über Kenntnisse in den Bereichen der Warenkunde, (Lebensmittel-)chemie und Lebensmittelrecht und können so die Eignung einer Methode auch hinsichtlich erwarteter Menge, der Matrix des Lebensmittels, Kosmetikums, Bedarfsgegenstands oder Futtermittels sowie möglicher Interferenzen und zu überwachender Grenzwerte beurteilen. In geringerem Umfang gilt dies auch für den Bereich der Umweltanalytik. Dass sich die Absolventinnen und Absolventen in Veranstaltungen der entsprechenden Module diese Kompetenzen aneignen, belegen sie durch das Bestehen der jeweiligen Abschlussklausuren.
- Die Absolventinnen und Absolventen können bei der Versuchsplanung bisher angeeignetes Fachwissen auf konkrete experimentelle oder theoretische Aufgabenstellungen anwenden, systematische Einflussfaktoren und Fehlerquellen identifizieren sowie sicherheitsrelevante Aspekte berücksichtigen. Das hierfür notwendige Abstraktionsvermögen, die Problemlösungskompetenz und die Fähigkeit, komplexe Zusammenhänge zu strukturieren, vertiefen die Studierenden in forschungsbezogenen Praktika bei denen sie wissenschaftliche Fragestellungen lösen.
- Das Vorgehen entwickeln die Studierenden unter Begleitung der Lehrenden selbstständig und diskutieren es in der Gruppe. Dies beinhaltet auch das Festlegen geeigneter Qualitätssicherungsmaßnahmen zur Sicherstellung der Validität der Ergebnisse und die Ergebnisdarstellung.
- Nach der Präsentation und Diskussion der geplanten Vorgehensweisen in Seminaren und Besprechungen, sowohl untereinander, als auch mit den Lehrenden, zeigen die Studierenden, dass die geplanten Vorgehensweisen in den jeweiligen Praktika auch praktisch sicher umgesetzt und transparent dokumentiert werden können.
- Die Absolventinnen und Absolventen können die Aussagekraft und Limitierungen der Analyseergebnisse für den geplanten Zweck beurteilen. Durch die Begleitung der Praktikumsversuche, anstatt der Abnahme der Entscheidung über Richtig und Falsch durch die Lehrpersonen, übernehmen die Studierenden für die in den Praktika generierten Werte selbst die Verantwortung und demonstrieren so die erworbene Kompetenz.
- Die abschließende Beantwortung der wissenschaftlichen Fragestellung erfolgt selbstständig nach Diskussion innerhalb der Studierenden und mit den Lehrenden durch die Anwendung des theoretischen Fachwissens in den entsprechenden Disziplinen (Lebensmittel- und Umwelttoxikolo-

gie, Biochemie, Lebensmittel- und Umweltchemie, Technologie der Lebensmittel) und geeigneter Methoden der statistischen Analyse und Darstellung und belegen im Dialog mit den Lehrenden ihre Kompetenz.

- Die Befähigung zur Methodenentwicklung und -validierung wird durch zudem eigenständiges Lösen einzelner, üblicherweise bei der Entwicklung quantitativer (massenspektrometrischer) Methoden auftretender exemplarischer Fragestellungen in den Lehrveranstaltungen zu den Themenbereichen Umweltanalytik, eingeführt und durch eigenständige Bewertung der Validität einer publizierten Methode demonstriert. Bei circa der Hälfte der Masterarbeiten besteht das Hauptziel in der Entwicklung, Etablierung oder Validierung einer Methode.
- Die Eigenständigkeit im Wissenserwerb und die evidenzbasierte Diskussion werden insbesondere in den Lehrveranstaltungen mit Inhalten aus dem Umwelt- und Verbraucherschutz von den Lehrenden durch die aktive Anwendung von Datenbanken und Online Tools wissenschaftlicher Behörden und Gremien (wie die European Food Safety Authority und des Bundesinstituts für Risikobewertung) gefördert.

Befähigung zur Aufnahme einer Erwerbstätigkeit

- Die beschriebene wissenschaftliche Befähigung entspricht den Anforderungen an den Zweiten Prüfungsabschnitt der Staatsprüfung, die (nach der einjährigen Zusatzausbildung in der amtlichen Lebensmittelüberwachung) zum Dritten Prüfungsabschnitt und damit der Berufsbezeichnung „Staatlich geprüfte Lebensmittelchemikerin/staatlich geprüfter Lebensmittelchemiker (und des damit verbundenen Berufsfelds) führt.
- Die bis zum Zweiten und ggf. Dritten Prüfungsabschnitt gesammelten wissenschaftlichen Kompetenzen ermöglichen die Leitung einer Abteilung oder Aufgaben im Qualitätsmanagement in der amtlichen Lebensmittelüberwachung, in Handelslaboren sowie in Laboren der lebensmittel-, kosmetika-, bedarfsgegenstände-, futtermittel- und arzneimittelproduzierenden Klein- und mittelständischen Industrie zu übernehmen. Sie befähigen zudem zur Promotion im Bereich der Lebensmittelchemie und der Lebenswissenschaften, die Berufsfelder im gesundheitlichen Verbraucherschutz bei nationalen und internationalen Behörden, leitende Positionen in der kosmetika-, bedarfsgegenstände-, futtermittel- und arzneimittelproduzierenden Industrie sowie im Wissenschaftsmanagement erschließt. Im Rahmen des Wahlpflichtpraktikums und der Präsentation der Erfahrungen der Studierenden, sowie durch Vorträge aktueller und ehemaliger wissenschaftlicher Mitarbeiterinnen und Mitarbeiter des Lehrstuhls im Rahmen der Seminare des Forschungspraktikums können die Studierenden für sie geeignete Berufsfelder von Lebensmittelchemikerinnen und Lebensmittelchemikern identifizieren.
- Neben den rein fachlichen Kompetenzen kommen den Absolventinnen und Absolventen im Berufsleben die im Studium gesammelte Erfahrung mit Problemlösungsstrategien, erfolgreicher, zielorientierter Zusammenarbeit im Team, Eigenständigkeit im Wissenserwerb und Eigenverantwortlichkeit zugute.

Persönlichkeitsentwicklung

- Die Absolventinnen und Absolventen wenden die Regeln guter wissenschaftlicher Praxis an und beachten sie. Die Lehrenden fördern zudem die Selbstverantwortung für den Wissenserwerb sowie ein an wissenschaftlichen Werten orientiertes Denken und Handeln. Das eigenverantwortliche Arbeiten und die ergebnisoffene Diskussion mit den Lehrenden fördert das Bewusstsein für Selbstreflexion, Offenheit, Verlässlichkeit, Überprüfbarkeit, Transparenz, Objektivität und Eindeutigkeit. Die Absolventinnen und Absolventen müssen sich während ihres Industrie- oder Auslandspraktikums im Wahlpflichtbereich in neue Arbeitsweisen und Organisationsstrukturen einfinden und erweitern so ihren persönlichen Horizont.

Befähigung zum gesellschaftlichen Engagement

- Die Absolventinnen und Absolventen haben ihr Wissen bezüglich wirtschaftlicher, gesellschaftlicher und naturwissenschaftlicher Fragestellungen erweitert und können begründet Position

beziehen. Durch die Behandlung aktueller Fragestellungen im Bereich des Umwelt- und Verbraucherschutzes sowie der Lebensmittelsicherheit werden die Studierenden in den Lehrveranstaltungen für die wirtschaftliche und gesellschaftliche Bedeutung ihrer Tätigkeiten sensibilisiert und ermutigt ihre im Studium erarbeiteten Kompetenzen aktiv in die Gesellschaft einzubringen.

Abbreviations used

Course types: **E** = field trip, **K** = colloquium, **O** = conversatorium, **P** = placement/lab course, **R** = project, **S** = seminar, **T** = tutorial, **Ü** = exercise, **V** = lecture

Term: **SS** = summer semester, **WS** = winter semester

Methods of grading: **NUM** = numerical grade, **B/NB** = (not) successfully completed

Regulations: **(L)ASPO** = general academic and examination regulations (for teaching-degree programmes), **FSB** = subject-specific provisions, **SFB** = list of modules

Other: **A** = thesis, **LV** = course(s), **PL** = assessment(s), **TN** = participants, **VL** = prerequisite(s)

Conventions

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

Notes

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

In accordance with

the general regulations governing the degree subject described in this module catalogue:

ASPO2015

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

02-Mar-2016 (2016-46)

25-Oct-2017 (2017-65)

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.

The subject is divided into

Abbreviation	Module title	ECTS credits	Method of grading	page

Contents		
Practical course to be completed at universities abroad. Students may complete this course in the context of exchange programmes such as Erasmus etc. The contents of the course should correspond to the contents of a lab course offered in the context of the Master's programme in Chemistry (120 ECTS credits); please consult with the competent coordinator in advance.		
Intended learning outcomes		
Students are familiar with procedures and processes used at universities in countries other than Germany. They have acquired subject-specific skills as well as language and interpersonal skills.		
Courses (type, number of weekly contact hours, language — if other than German)		
P (o) Module taught in: German and/or English and potentially language of the respective country		
Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)		
a) report (10 to 20 pages) or b) talk (10 to 20 minutes) Language of assessment: German and/or English and potentially language of the respective country

Contents		
Quantitative and qualitative aspects of nutrition, e.g. energy balance, basal metabolic rate, the gross and metabolisable energy of the three main nutrients, biological value; fundamental principles of dietetics and special diets; functions of the main organs; fundamental principles of digestion, absorption and excretion as well as of the biosynthesis and metabolism of food constituents; interactions in intermediary metabolism; principles of metabolic regulation and hormonal regulation; mineral metabolism; nutrition and vitamins.		
Intended learning outcomes		
Students know how the relevant micro and macronutrients are transported through the human body. They have developed an understanding of the biochemical processing of nutrients in the cells and of the regulatory mechanisms of metabolic pathways.

Contents		
Cell fractionation and characterisation, enzyme kinetics, conversion of a substrate with cell fractions and identification of metabolites using instrumental methods of analysis.		
Intended learning outcomes		
Students have developed the ability to independently perform homogenisations and fractionations of cells and tissues as well as to use biochemical methods (e.g. determination of enzyme kinetics) to characterise the fractions. They are able to independently plan an incubation mixture for a metabolic conversion, to perform that conversion and to identify the metabolites using suitable instrumental methods of analysis.		
Courses (type, number of weekly contact hours, language — if other than German)		
P (4) + P (4)		
Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)		
lab course assessment components: Vortestate and Nachtestate (pre and post-experiment exams, approx. 15 minutes), assessment and documentation of practical assignments (approx. 10 pages) and written report (approx. 5 to 10 pages) Language of assessment: German or English

Contents		
Chemical constituents, production and analysis of cosmetics, consumer goods and tobacco products. Chemical changes caused in those products during processing, storage and transportation as well as pharmacological and toxicological effects of their normal and abnormal constituents.		
Intended learning outcomes		
Students are familiar with cosmetics, consumer goods and tobacco products as well as with their chemical constituents. They know methods for the analysis of cosmetics, consumer goods and tobacco products, the relevant legal provisions as well as constituents that have pharmacological and toxicological effects.		
Courses (type, number of weekly contact hours, language — if other than German)

Contents		
Working with the food chemistry literature and databases, discussion of recent research findings and current methods in food chemistry, solution of research problems, statistical analysis of data, presentation of research findings.		
Intended learning outcomes		
Students have developed the ability to find literature about a particular research problem, perform experiments to solve that problem, prepare an account of their work and deliver a presentation on their findings.

Methods for the analysis of foods, tobacco products, cosmetics, consumer goods and feeds including the interpretation of measured data with statistical methods.		
Intended learning outcomes		
Students are able to select and apply an appropriate method for the analysis of particular foods, tobacco products, cosmetics, consumer goods or feeds. They are able to interpret the measured data with statistical methods as well as to assess the foods, tobacco products, cosmetics, consumer goods or feeds conclusively. Students are able to independently select relevant analysis parameters for the assessment of foods/feeds containing genetically modified organisms, to independently select appropriate analytical methods, to independently apply those methods as well as to interpret the measured data with appropriate statistical methods. They are able to assess the foods/feeds on the basis of the analytical values.

Contents		
a) General food law, aa) Structure and contents of food law, bb) Structure and contents of EU food law. b) Overview of the organisation and purpose of official controls on products and tobacco products pursuant to Section 1 Subsection 1 Sentence 1 No. 2, aa) Administrative structures at the federal and state levels, bb) Constitutional law and general administrative law, cc) Administrative jurisdiction, dd) Offences and legal proceedings, ee) EU institutions and bodies, ff) Legal acts of the EU. c) Overview of quality assurance procedures in laboratories and industry, aa) Quality management systems in laboratories and industry (DIN EN ISO 9000 and EN 45000 or ISO/IEC 17000 standards, OECD Principles of Good Laboratory Practice (GLP)), bb) German and EU legislation on conformity assessment including certification and testing, cc) Handbooks and documentation of quality assurance procedures in laboratories and the food industry.		
Intended learning outcomes		
Students are able to identify foods, cosmetics, feeds, consumer goods and tobacco products as well as to assess them on the basis of the relevant laws. They know which national and international bodies are responsible for which food regulatory issues. They have developed the necessary theoretical knowledge to enable them to develop a quality management system and work according to the standards of good laboratory practice.		
Courses (type, number of weekly contact hours, language — if other than German)		
V (1.3) + V (1.3)		
Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)		
a) written examination (60 to 120 minutes) or b) oral examination of one candidate each (approx. 20 minutes) or c) oral examination in groups (groups of 2, approx. 30 minutes total) Language of assessment: German or English		
Allocation of places

Contents			
Basic unit operations in the production and processing of foods, tobacco products pursuant to Section 1 Subsection 1 Sentence 1 No. 2, cosmetics, consumer goods and feeds; e.g. mechanical operations (cleaning, sorting, comminution, sieving, mixing, filtering, expressing, emulsification, centrifugation, extracting), thermal operations (heating, cooling and freezing, concentration, drying, distillation), biotechnological processes (e.g. fermentation, acidification).			
Intended learning outcomes			
Students know all relevant processes in food technology as well as examples of their application.			
Courses (type, number of weekly contact hours, language — if other than German)			
V (2) + E (1)			
Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)

Contents		
Harmful effects of natural and synthetic chemicals, toxicodynamics (receptor theory, dose-response relationships); toxicokinetics (absorption, distribution, biotransformation, elimination); classification of toxicants and their biological effects; toxicology and animal testing; methods for toxicity testing (acute, subacute, subchronic, chronic, carcinogenic, mutagenic and teratogenic toxicity tests); principles of epidemiological studies; risk assessment and definition of exposure limits and guidelines.		
Intended learning outcomes		
Students are familiar with the toxicokinetics and modes of toxic action of relevant natural and synthetic chemicals as well as with methods for toxicity testing. They have learned the principles of epidemiological studies. They know the steps involved in a risk assessment and in the definition of exposure limits and guidelines. Students are able to independently select an appropriate test for the solution of a given food toxicological question and are able to perform that test.		
Courses (type, number of weekly contact hours, language — if other than German)		
V (2) + V (2) + P (2)		
Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)		
Assessment: a) written examination (60 to 120 minutes) or b) oral examination of one candidate each (approx. 20 minutes) or c) oral examination in groups of 2 candidates (approx. 30 minutes total) and lab course assessment components: Vortestate and Nachtestate (pre and post-experiment exams, approx. 15 minutes), assessment and documentation of practical assignments (approx. 10 pages) and written report (approx. 5 to 10 pages) Language of assessment: German or English

Contents		
Chemical constituents, production and analysis of particular foods and feeds, chemical changes caused in those foods and feeds during processing, storage and transportation as well as pharmacological and toxicological effects of their normal and abnormal constituents.		
Intended learning outcomes		
Students are familiar with the chemistry and analysis of functional foods and feeds as well as foods/feeds containing genetically modified organisms. They know methods for the analysis of cosmetics, consumer goods and tobacco products, the relevant legal provisions as well as constituents that have pharmacological and toxicological effects. They have developed a thorough knowledge of the chemistry of food constituents and methods for the analysis of particular foods and feeds including the interpretation of measured data with statistical methods.

1 semester	graduate	It is not permitted to use activities performed under a research assistant contract for this module. The tutorial must accompany a different course than the tutorial held in module o8-WRM1.
Contents		
This module gives students the opportunity to teach a tutorial accompanying a lecture offered by the Faculty of Chemistry and Pharmacy and learn how to present and teach scientific topics in an appropriate manner.		
Intended learning outcomes		
Students are able to teach students in earlier stages of their degrees and tailor their teaching to those students' needs.		
Courses (type, number of weekly contact hours, language — if other than German)		
T (3)		
Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)		
Tutoring activities, (preparation of status and/or wrap-up reports, approx. 100 hours total) Language of assessment: German and/or English
