<b>Contents</b>		
Over the past decades, the global networking of the economy has risen significantly and, among others, comprises the communication, transport, production and trade nowadays. An international worksharing has developed, which has never existed before in this way. Companies are able to decouple work and capital-intensive production processes. This is one of the reasons for the increase of the trade volume. At the same time, the world trade, which is in the area of tension between liberalisation and protectionism, is a controversial issue.		
<b>Intended learning outcomes</b>		
Students get a deeper insight into the global economy as well as into the reasons and impacts of the inter-connectivity. They acquire an extended understanding of economic and geographic issues in the area of global economy and learn to reflect different developments and theoretical approaches critically.

<p>Description:</p> <p>The course provides students with an overview of the macroeconomic conditions and consequences of European integration and monetary union. The course thus helps students gain a deeper understanding of the current crisis in the euro area as well as the debate on the future of European economic integration.</p> <p>Content:</p> <p>The first part of the course provides students with an overview of the history of European integration with a focus on economic and monetary integration. We then discuss the institutional framework of the European Monetary System, the predecessor of the euro area in the period from 1979 to 1998. Next, the criteria for admission to the European Monetary Union (EMU) and the monetary policy strategy of the European Central Bank will be presented and discussed. Building on the traditional Mundell-Fleming model, the course will make students familiar with the theory of the optimum monetary area and will then provide them with deeper insights into this theory on the basis of a simple New Keynesian model. Students will thus be able to make a well-founded assessment of the advantages and disadvantages of monetary union as well as the conditions under which monetary union can be successful. In the final part of the course, we analyse the coordination and incentive problems that arise for fiscal policy in a monetary union. In particular, we deal with the question of how these issues are addressed within the European Monetary Union. Current macroeconomic developments within the euro area as well as the causes and consequences of the euro crisis are discussed at various points in the course.</p>			
Intended learning outcomes			
After completing this course students will have gained a profound understanding of the costs and benefits of monetary integration in general and specifically in the EMU. Thus, they will enhance their general macroeconomic understanding by applying it to real world problems. In addition, students will have knowledge of the institutions of common fiscal and monetary policy in Europe.
