Cultures and societies are designed via narratives. Humans are narrating beings, who process events and give meaning to their everyday lives by telling stories. Cultures and their agents do not only create oral, written, analogue and digital narrations, but also tell stories through pictures, actions, arts, rituals and customs. Narratives and stories as well as meta-narratives, such as the narration of "the linear progress", are general expressions of cultural processes, as well as storage media for cultural processes and, more recently, subjects of cultural-analytic research.		
<b>Intended learning outcomes</b>		
The module Narrative Cultures provides the students with skills in understanding a wide diversity of mediatized or materialized narratives in order to learn how to analyze narrative everyday cultures.

<b>Contents</b>		
In European Ethnology, spaces are viewed, among other things, as results of the practices of various actors. They are also seen in European ethnological cultural analysis as fields of action that have been produced in each case as well as repeatedly renewed and which in turn shape and enable society in a variety of ways. The making, design and change of urban or rural spaces are of equal interest just as regional or local spaces to include co-designing or designed entities. A focus of this module is the cultural analysis of numerous spaces as made by actors and viewed from a past, present and future perspective.		
<b>Intended learning outcomes</b>		
Students gain further knowledge in the field of European ethnology analysis of space and social entities. The main focus is current theoretical concepts and methods to include classical and current empirical studies.

Students exemplarily increase their knowledge of understanding and analyzing cultural processes in various societal and scientific fields of practice. Knowledge is understood here as a social practice that structures everyday life. In order to gain insight into the diverse ways of knowledge production, the various actors who share and design knowledge, as well as the respective geographical spaces - in their historical and current dimensions - have to be considered.		
<b>Intended learning outcomes</b>		
Students increase their knowledge of disciplinary history. They learn how to critically reflect divergent aspects and to analyze and interpret these within disciplinary contexts.

At the same time, the world trade, which is in the area of tension between liberalisation and protectionism, is a controversial issue.		
<b>Intended learning outcomes</b>

The module consists of two courses that deal with alternating current topics. China's pace of development has been at a very high level for more than three decades, so that it is necessary to deal with current topics beyond the long-term fixed study specialisation. Therefore, this module offers the opportunity to take up new trends in China's society, politics or economy and to deal with them exemplarily in the form of two courses. The module is primarily aimed at students in the later stages of their studies.		
<b>Intended learning outcomes</b>		
The module provides students with the competence to deal with a current topic academically and to work on it with the help of appropriate sources. This ability is the basic requirement for successfully writing a Bachelor's thesis.

The module consists of two courses within one year. Firstly, it offers an overview of selected topics of East Asian traditions, such as religions, customs, cultural skills, travelling, the cultural understanding of landscape, etc. with a focus on China. Secondly, it will create a link to other East Asian cultural areas, especially Japan and Korea. Both events will not only show the similarities and differences between the bordering cultural areas, but also continuities between the pre-modern and modern epochs.		
Intended learning outcomes		
Students acquire the ability to determine and classify religious and cultural phenomena in their historical and social contexts. They are able to critically analyse and compare problems and decisions in China and neighbouring regions.

The module deals with two different epochs and/or schools of intellectual history of pre-modern or modern China in two consecutive semesters. The students get acquainted with the positions, arguments, terminology, and reference systems of the respective schools of intellectual history and epochs using original texts in translation. This provides an introduction to exemplary areas of Chinese intellectual history. Since the terminology is also dealt with in Chinese, the module is suitable for students from the third semester onwards.		
<b>Intended learning outcomes</b>		
Students are able to differentiate positions and arguments as well as terminologies in the covered epochs and schools and to independently classify them in argumentative contexts. They have basic skills of developing further epochs of intellectual history critically.
