

Subdivided Module Catalogue

for the Subject

Science of Sport

with the degree "Erweiterungsprüfung für das Lehramt an
Realschulen"
(ECTS credits)

Examination regulations version: 2015

Responsible: Faculty of Human Sciences

Responsible: Institute of Sport Science

Responsible: Centre for Sports and Physical Education

Abbreviations used

Course types: **E** = field trip, **K** = colloquium, **O** = conversatorium, **P** = placement/lab course, **R** = project, **S** = seminar, **T** = tutorial, **Ü** = exercise, **V** = lecture

Term: **SS** = summer semester, **WS** = winter semester

Methods of grading: **NUM** = numerical grade, **B/NB** = (not) successfully completed

Regulations: **(L)ASPO** = general academic and examination regulations (for teaching-degree programmes), **FSB** = subject-specific provisions, **SFB** = list of modules

Other: **A** = thesis, **LV** = course(s), **PL** = assessment(s), **TN** = participants, **VL** = prerequisite(s)

Conventions

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

Notes

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

In accordance with

the general regulations governing the degree subject described in this module catalogue:

LASPO2015

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

o8-Sep-2015 (2015-115)

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.

The subject is divided into

Abbreviation	Module title	ECTS credits	Method of grading	page
Scientific Discipline (60 ECTS credits)				
Area 1 (60 ECTS credits)				
o6-SP-RS1-SPSG-152-m01	Recognizing essential educational and social issues in sports science	6	NUM	10

Contents		
In this module we use examples from various optional types of sports from the field of trend and recreational sports to discuss, evaluate and apply selected movement forms from current movement culture, game culture and sports culture. In doing so, the students examine teaching and learning in the area of trend and recreational sports (education to and through sports) from different points of view. We discuss specific movement and perception competencies, aspects of selected seasonal movement, game and sports offers (winter vs. summer) in view of safety and environmental education as well as special method and teaching competencies of the current movement culture. The students test and evaluate their knowledge about sport didactics in practice in accordance with differentiated guidelines regarding performance and teaching.		
Intended learning outcomes		
The students have advanced knowledge about current trends of movement culture and corresponding teaching/learning concepts. They have advanced subject-didactic, pedagogical, motor and ecological competencies in seasonal trend and recreational sports. They know the basic connections between trend and recreational sports and super-ordinated education goals (esp. safety and environmental education). Furthermore, they are able to appropriately apply exemplary teaching/learning competencies to variable exercise settings for trend and recreational sports whilst taking into account different learning levels and goals (education to and through sports).		
Courses (type, number of weekly contact hours, language — if other than German)		
S (2) + S (1)		
Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)		
practical examination (approx. 10 minutes) Assessment offered: Depending on offer/season		
Allocation of places		
Number of places depending of type of sport. Should the number of applications exceed the number of available places, places will be allocated according to the number of subject semesters.

Contents		
In this module we discuss and examine central topics of sports psychology and either disciplines of sports education/subject didactics or training and movement science. We compare our results to the current state of research of the respective discipline and determine their effects on movement, game and sport practice at and outside of school. We study and evaluate disciplinary and interdisciplinary theories, models, methods and concepts of psychology, pedagogy, subject didactics, training science or movement science and discuss their contribution to and significance for a deeper understanding of movement, game and sport practice. We use examples from central and current selected topics of the respective disciplines to achieve a deeper understanding of the backgrounds and topics of sports from the perspective of sports science.		
Intended learning outcomes		
The students have essential professional knowledge and competencies in sports psychology and advanced professional knowledge and competencies in the central topics of subject-didactic sports education or training and movement science and are able to evaluate these topics in view of current research results. They know the crucial discipline-specific topic areas and corresponding terms, systematics, models and methods and are able to estimate their importance for well-founded scientific teaching/learning situations for various target groups. Furthermore, they have technical presentation and communication skills.		
Courses (type, number of weekly contact hours, language — if other than German)		
V (1) + S (2)		
Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)		
presentation (30 minutes) with written elaboration in S creditable for bonus		
Allocation of places		
S approx. 25 places. Should the number of applications exceed the number of available places, places will be allocated according to the number of subject semesters.

Contents		
In this module we elaborate on the conceptual basics of sport didactics and choosing topics for physical education on the basis of the connection between goals, contents and methods. We discuss various concepts of sports and didactic approaches to teaching sports as well as their epistemological position whilst taking into account learning and education theories. Further, we discuss the implementation of these concepts into class in various exemplary movement fields and types of sports and evaluate selected central topics of the development of sports and school sports (e.g. gender in sports, integration and inclusion in and through sports etc.) in view of the current discourse on subject didactics.		
Intended learning outcomes		
The students have essential professional skills in teaching physical education and physical education games and are able to apply these skills to various movement fields and types of sports. They know the basics and epistemological backgrounds of various didactic approaches to sports and physical education games and are able to evaluate their phenomena and structures as well as corresponding teaching topics in view of theoretical knowledge about subject didactics. They can apply their knowledge to teaching/learning situations in sports and physical education classes.		
Courses (type, number of weekly contact hours, language — if other than German)		
V (1) + V (1) + S (2)		
Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)		
presentation (30 minutes) with written elaboration in S creditable for bonus		
Allocation of places

Contents			
In this module we discuss, evaluate and transfer basic connections between goals, contents and methods of physical education to specific teaching concepts for various movement fields and types of sports. For this purpose, we examine planning, conception and evaluation processes in the context of subject didactics. Furthermore, we test and evaluate differentiated teaching scenarios for various movement settings and target groups whilst taking into account the possibilities to promote basic infantile development through movement, game and sports offers. We especially focus on movement, game and sports offers in view of their possibilities to compensate for psychophysical overload and one-sided stress. In this context we also study the requirements and consequences of cultural change processes in the context of sports and movement culture.			
Intended learning outcomes			
The students have essential professional skills in reviewing, classifying and evaluating the methodical principles of physical education and school sports in a conceptual manner. They know the effects of sport concepts and subject-didactic concepts on teaching practice and can use these concepts in practice to plan physical education classes and conceptualise school sports programmes. At the same time, they have basic evaluation competencies which enable them to be critical of such planning and evaluating guidelines. The students have professional skills in conceptually reviewing sports and exercise offers that have a compensatory effect as well as their subject-didactic implementation.			
Courses (type, number of weekly contact hours, language — if other than German)			
S (1) + S (1) + S (2)			
Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)

Contents		
This module provides a theoretical and/or practical insight into current central questions and backgrounds of inclusion and integration in and through sports. It addresses and evaluates the possibilities of "special" target groups (e.g. disabled people or people with a migrant background) to participate in movement, games and sports and establishes various connections to sports science and subject didactics. It shows the basic possibilities and opportunities of integration and inclusion in and through sports in a theoretical and practical manner.		
Intended learning outcomes		
The students have selected professional skills and specific background knowledge about integration and inclusion in and through sports and/or about corresponding subject-didactic implementation possibilities in settings at and out of school. They know the corresponding current discourse about the topic and/or possibilities to modify teaching situations as well as implementation possibilities in settings at and out of school. They understand the possible contributions of movement, games and sports to super-ordinated education goals (e.g. intercultural education, tolerance and respect).		
Courses (type, number of weekly contact hours, language — if other than German)

Contents		
In this module we use examples from special topics as well as sports and movement offers of trend and health sports to study, evaluate and test current trends and topics of movement-, game- and sport-cultural practice and health sports. The students acquire exemplary insights into selected scientific and/or didactic principles of special sports, game and movement offers or topics of health sports and understand their scientific backgrounds as well as their didactic implementation possibilities.		
Intended learning outcomes		
The students have basic professional knowledge about current trends of movement culture and/or current topics of health sports. They know corresponding teaching/learning concepts and/or have basic subject-didactic, pedagogical and motor competencies and are able to use them for other teaching/learning situations and various target groups of trend and health sports. The understand the possible contributions of movement, games and sports to super-ordinated education goals (e.g. cultural education, environmental education, health promotion).		
Courses (type, number of weekly contact hours, language — if other than German)

Contents		
In this course we talk about questions and issues of sports science and evaluate them from an interdisciplinary point of view (natural, human and social sciences). We focus on the theoretical examination of central principles of sports education and social sciences and establish connections to topics from movement, game and sports culture. The students acquire interdisciplinary scientific knowledge about the backgrounds and topics of sports. Therefore, they develop the ability to understand and analyse actions of sports and movement culture in view of social and human sciences. In the area of sports education the students learn about the basic principles of physical education in the context of sports activities and acquire basic knowledge about education theory and its historical principles. In the area of the principles of social science and social psychology we discuss central theories, models, methods and concepts of sociology, psychology, and cultural theory and elaborate on their contributions to the understanding of our movement, game and sports culture.		
Intended learning outcomes		
The students have essential professional skills in carrying out research and working in the field of sports science, sports education and sociology/social psychology of sports. They know the principles of movement culture in view of education theory and sport sociology and are able to put these principles into practice. They have acquired differentiated professional and methodological competencies in the area of sports education and sports sociology by examining and comparing central terms, systematics, models, concepts and methods of the disciplines of sports science that are relevant to humanities and social sciences.

In this module we use examples from gliding on snow and ice, exercising with sports equipment and exercising in water to discuss, evaluate and apply basic competencies of sport didactics and basic teaching/learning conceptions of movement fields and sports for individuals. We focus on acquiring basic movement and perception competencies in various settings (different media (water, snow), with and without sports equipment) as well as corresponding didactic and pedagogical competencies in teaching and learning with heterogeneous groups (including age, gender, individual condition, inclusion). Furthermore, we discuss and evaluate trans-situational and situation-specific aspects of safety and environmental education. The students test and evaluate their knowledge about sport didactics in practice in accordance with differentiated guidelines regarding performance and teaching.		
Intended learning outcomes		
The students have basic movement and perception competencies and know various teaching/learning concepts from the area of exercise settings for individuals and individual sports. They have basic subject-didactic, pedagogical and motor competencies in the field of gliding on snow and ice/winter sports, exercising with sports equipment/gymnastics and exercising in water/swimming and are able to appropriately deal with different target groups in these settings. Furthermore, the students have basic competencies in the field of safety and environmental education.

Contents		
In this module we discuss, evaluate and apply basic competencies of sport didactics and basic teaching/learning conceptions of playing, physical education games and movement fields for teams. We study the basics of playing as well as concepts of integrative and special didactics of physical education games and apply them in basketball, volleyball and handball. We focus on acquiring basic movement and perception competencies in physical education games as well as basics of subject didactics in various settings for teams (with and without a ball, target throwing and net/wall games, size of the playing field and number of players) as well as for different groups (including age, gender, individual condition, inclusion). Furthermore, we discuss and evaluate trans-situational and situation-specific aspects of fairness, cooperation and team spirit. The students test and evaluate their knowledge about sport didactics in practice in accordance with differentiated guidelines regarding performance and teaching.		
Intended learning outcomes		
The students have basic movement and perception competencies in the field of physical education games and know appropriate teaching/learning concepts of playing with and without a ball. They can apply these concepts in the field of team sports or exercise settings for teams. They have basic subject-didactic, pedagogical and motor competencies in the big physical education games handball, basketball and volleyball and are able to appropriately deal with different target groups in these teaching/learning settings. Furthermore, the students have basic competencies in cooperation and interaction.

In this module we use examples from running, jumping, throwing, gymnastics and dance as well as exercising with and without sports equipment and exercising in water to discuss, evaluate and apply basic competencies of sport didactics and basic teaching/learning conceptions of movement fields and sports for individuals. We focus on acquiring and extending basic movement and perception competencies in various settings (different media (water, open-air areas, gyms), with and without sports equipment) as well as corresponding didactic and pedagogical competencies in teaching and learning with different groups (including age, gender, individual condition, inclusion). The students test and evaluate their knowledge about sport didactics in practice in accordance with differentiated guidelines regarding performance and teaching.		
Intended learning outcomes		
The students have basic and advanced movement and perception competencies and know various teaching/learning concepts in the field of exercise settings for individuals and individual sports. They have basic subject-didactic, pedagogical and motor competencies in the fields of running, jumping, throwing (athletics) as well as in physical expression and movement creation (gymnastics and dance) and are able to appropriately deal with different target groups in these teaching/learning settings. The students have advanced teaching/learning competencies in the field of exercising in water and are therefore able to flexibly handle other teaching/learning situations and different learning levels as well as different target groups.

Contents		
During this module, the students improve, advance and extend their teaching/learning competencies in the fields of playing, exercising in water and creating movement. They use examples from the target throwing and net/wall games basketball and volleyball and from exercising in water/swimming to broaden their movement and perception competencies as well as their method and evaluation competencies. Furthermore, they acquire basic competencies in the target kicking game soccer and in creating movement/acrobatics. They also focus on teaching in an increasingly differentiated, varied manner (education to and through sports) in homogeneous and heterogeneous settings for teams of an increasing learning level. They thoroughly examine individual learning and performance requirements and their consequences for teaching/learning processes. Furthermore, they learn how aspects of playing and performing are linked to aspects of cooperation and fairness and how they can be promoted. The students test and evaluate their knowledge about sport didactics in practice in accordance with differentiated guidelines regarding performance and teaching.		
Intended learning outcomes		
The students have advanced movement, perception, method and evaluation competencies in the fields of target throwing games, net/wall games and exercising in water as well as basic competencies in the field of target kicking games, physical expression and movement creation. They have advanced subject-didactic, pedagogical and motor competencies in the big physical education games basketball and volleyball. They are able to appropriately apply exemplary teaching/learning competencies to varied exercise settings whilst taking into account different learning levels and goals (education to and through sports).

Developing advanced teaching competencies in movement, play and sports 2		o6-SP-RS6-EKSH2-152-m01
Module coordinator		Module offered by
head of Centre for Sports and Physical Education		Centre for Sports and Physical Education
ECTS	Method of grading	Only after succ. compl. of module(s)
8	(not) successfully completed	--
Duration	Module level	Other prerequisites
2 semester	undergraduate	Regular attendance of the seminars (minimum 80% of sessions offered).
Contents		
In this module the students improve, advance and extend their teaching/learning competencies in various types of sports. They use examples from playing, exercising with equipment/gymnastics, running, jumping, throwing/athletics and from the creation of movement/gymnastics/dance to broaden their movement and perception competencies as well as their method and evaluation competencies. They focus on teaching in an increasingly differentiated, varied manner (education to and through sports) in homogeneous and heterogeneous settings for teams of an increasing learning level. In doing so, they learn about exemplary connections to superordinated education goals (e.g. aesthetic education, health promotion). The students test and evaluate their knowledge about sport didactics in practice in accordance with differentiated guidelines regarding performance and teaching.		
Intended learning outcomes		
The students have advanced movement, perception, method and evaluation competencies in different exercise settings and individual sports and are able to adjust them to individual learning requirements. They have advanced subject-didactic, pedagogical and motor competencies in gymnastics, athletics and dance and are able to appropriately apply exemplary teaching/learning competencies to various exercise settings whilst taking into account different learning levels and goals (education to and through sports). The students are able to encourage and apply varied processes of physical expression and movement creation.		
Courses (type, number of weekly contact hours, language — if other than German)		
S (1) + S (2) + S (1) + S (2) + S (2)		
Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)		
practical examination (approx. 5 minutes)		
Allocation of places		
S(1) approx. 16 places, S(2) approx. 16 places, S(3) approx. 18 places, S(4) approx. 18 places, S(5) approx. 25 places. Should the number of applications exceed the number of available places, places will be allocated according to the number of subject semesters.		
Additional information		
If a seminar is part of a series of seminars, participants should have attended previous seminars in the series.		
Workload		
240 h

Module title		Abbreviation
Recognizing essentials of sports biology and training science		o6-SP-RS7-BTGV-152-m01
Module coordinator		Module offered by
head of Centre for Sports and Physical Education		Institute of Sport Science
ECTS	Method of grading	Only after succ. compl. of module(s)
6	numerical grade	--
Duration	Module level	Other prerequisites
2 semester	undergraduate	Regular attendance of seminar (minimum 80% of sessions offered).
Contents		
In this module we discuss central principles of sports biology and training sciences and establish connections to the implementation of health-oriented fitness offers. The students acquire a scientific understanding of movement and sports and learn about specific possibilities to promote fitness and health. In the field of sports biology, the students learn about the basic principles of human physiology in the context of sports activities and acquire basic knowledge about the body's morphological and functional adaptation to physical stress. In the field of training and movement science, they become familiar with central models, methods and concepts as well as the consequences and possibilities of their practical implementation in schools, in clubs and during recreation. They exemplary transfer and apply this knowledge to health-oriented fitness offers.		
Intended learning outcomes		
The students have essential professional skills in sports biology and training science. They know the sport biological principles and the adaptivity of the human organism and are able to establish connections between these principles and sports practice. By examining and comparing central terms, systematics, models, concepts and methods as well as their classification in view of different training goals and target groups, the students have acquired differentiated professional and methodological competencies in the area of training and movement science. They are able to estimate the importance of these competencies for a wholesome promotion of performance and health and can apply this knowledge to exemplary health-oriented fitness offers.		
Courses (type, number of weekly contact hours, language — if other than German)		
V (2) + V (2) + S (1)		
Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)		
written examination (approx. 60 minutes)		
Allocation of places		
S approx. 20 places. Should the number of applications exceed the number of available places, places will be allocated according to the number of subject semesters.

Recognizing and applying fundamentals of sports anatomy and human movement science		o6-SP-RS8-ABGV-152-m01
Module coordinator		Module offered by
head of Centre for Sports and Physical Education		Centre for Sports and Physical Education
ECTS	Method of grading	Only after succ. compl. of module(s)
5	numerical grade	--
Duration	Module level	Other prerequisites
2 semester	undergraduate	Regular attendance of seminar (minimum 80% of sessions offered).
Contents		
In this course we discuss the basics of functional anatomy as well as the musculoskeletal system and its overload and injury mechanisms. Furthermore, we survey possibilities and measures for individuals and groups to promote fitness and health. We study central terms, theories, concepts, methods and models of movement science in the context of sporting activities. We especially focus on various scientific perspectives on movement learning and changes in coordination as well as resulting consequences for teaching and learning movement at and out of school whilst taking into account the target group.		
Intended learning outcomes		
The students have key professional skills in functional anatomy and sports traumatology. They are able to utilise these skills in a manner that is appropriate to the situation and audience in order to plan and conduct measures of health and fitness promotion for individuals and groups. Furthermore, the students have essential professional skills in the fields of movement science and movement learning. They can apply their knowledge about movement science as well as the methods of analysing movement and teaching physical education to various movement fields and types of sports and are able to estimate their importance for a holistic development promotion.

head of Centre for Sports and Physical Education		Centre for Sports and Physical Education
ECTS	Method of grading	Only after succ. compl. of module(s)
5	numerical grade	--
Duration	Module level	Other prerequisites
1 semester	undergraduate	Regular attendance of the seminars (minimum 80% of sessions offered).
Contents		
In this module the students advance and extend their teaching/learning competencies in the field of gliding on ice and snow. They advance their movement and perception competencies as well as their method and teaching competencies in snow sports and extend them to the field of ice skating. The students focus on teaching in an increasingly differentiated, varied manner (education to and through sports) in homogeneous and heterogeneous settings for an increased learning level. They thoroughly examine individual learning and performance requirements for gliding on various surfaces and their consequences for teaching/learning processes. In addition, they learn about specific aspects of safety and environmental education. The students test and evaluate their knowledge about sport didactics in practice in accordance with differentiated guidelines regarding performance and teaching.		
Intended learning outcomes		
The students have advanced movement, perception, method and teaching competencies in gliding on snow and ice and are able to flexibly and appropriately estimate their significance for individual learning and performance conditions. They have advanced competencies in subject didactics, pedagogy, motor development, environmental education and safety education in the field of gliding on snow and ice and are able to utilize exemplary teaching/learning competencies whilst taking into account different learning levels and goals (education to and through sports, esp. environmental education).
