

Subdivided Module Catalogue for the Subject

Biology

as Unterrichtsfach with the degree "Erste Staatsprüfung für das Lehramt an Hauptschulen"

> Examination regulations version: 2009 Responsible: Faculty of Biology

JMU Würzburg • generated 26-Aug-2024 • exam. reg. data record L2|026|-|-|H|2009

Abbreviations used

Course types: \mathbf{E} = field trip, \mathbf{K} = colloquium, \mathbf{O} = conversatorium, \mathbf{P} = placement/lab course, \mathbf{R} = project, \mathbf{S} = seminar, \mathbf{T} = tutorial, $\ddot{\mathbf{U}}$ = exercise, \mathbf{V} = lecture

Term: **SS** = summer semester, **WS** = winter semester

Methods of grading: **NUM** = numerical grade, **B/NB** = (not) successfully completed

Regulations: **(L)ASPO** = general academic and examination regulations (for teaching-degree programmes), **FSB** = subject-specific provisions, **SFB** = list of modules

Other: **A** = thesis, **LV** = course(s), **PL** = assessment(s), **TN** = participants, **VL** = prerequisite(s)

Conventions

Unless otherwise stated, courses and assessments will be held in German, assessments will be offered every semester and modules are not creditable for bonus.

Notes

Should there be the option to choose between several methods of assessment, the lecturer will agree with the module coordinator on the method of assessment to be used in the current semester by two weeks after the start of the course at the latest and will communicate this in the customary manner.

Should the module comprise more than one graded assessment, all assessments will be equally weighted, unless otherwise stated below.

Should the assessment comprise several individual assessments, successful completion of the module will require successful completion of all individual assessments.

In accordance with

the general regulations governing the degree subject described in this module catalogue:

LASPO2009

associated official publications (FSB (subject-specific provisions)/SFB (list of modules)):

07-Aug-2012 (2012-87)

This module handbook seeks to render, as accurately as possible, the data that is of statutory relevance according to the examination regulations of the degree subject. However, only the FSB (subject-specific provisions) and SFB (list of modules) in their officially published versions shall be legally binding. In the case of doubt, the provisions on, in particular, module assessments specified in the FSB/SFB shall prevail.

The subject is divided into

Thesis (10 ECTS credits)

Preparation of a written Hausarbeit (thesis) in accordance with the provisions of Section 29 LPO I (examination regulations for teaching-degree programmes) is a prerequisite for teaching degree students to be admitted to the Erste Staatsprüfung (First State Examination). In accordance with the provisions of Section 29 LPO I, students studying for a teaching degree Hauptschule may write this thesis in the subject Didaktik einer Fächergruppe der Hauptschule (Didactics of a Group of Subjects of Hauptschule), in the subject they selected as Unterrichtsfach (subject studied with a focus on the scientific discipline) or in the subject Erziehungswissenschaften (Educational Science). Pursuant to Section 29 Subsection 1 Sentence 2 LPO I, students may also choose to write an interdisciplinary thesis.

places, there will be a uniform regulation for the courses of one module component. In this case, places on all courses of a module component that are concerned will be allocated in a standardised procedure. In this procedure, applicants who already have successfully completed at least one other module component of the respective module will be given preferential consideration. A waiting list will be maintained and places re-allocated as they become available. Selection process group 1 (95%): Places will primarily be allocated according to the applicants' previous academic achievements. For this purpose, applicants will be ranked according to the number of ECTS credits they have achieved and their average grade of all assessments taken during their studies or of all module components in the subject of Biologie (Biology) (excluding Chemie (Chemistry), Physik (Physics), Mathematik (Mathematics)) at the time of application. This will be done as follows: First, applicants will be ranked, firstly, according to their average grade weighted according to the number of ECTS credits (qualitative ranking) and, secondly, according to their total number of ECTS credits achieved (quantitative ranking). The applicants' position in a third ranking will be calculated as the sum of these two rankings, and places will be allocated according to this third ranking. Among applicants with the same ranking, places will be allocated according to the qualitative ranking or otherwise by lot. Selection process group 2 (5%): Places will be allocated according to the following quotas: Quota 1 (50% of places): total number of ECTS credits already achieved in modules/module components of the Faculty of Biology; among applicants with the same number of ECTS credits achieved, places will be allocated by lot. Quota 2 (25% of places): number of subject semesters of the respective applicant; among applicants with the same number of subject semesters, places will be allocated by lot. Quota 3 (25% of places): allocation by lot. Should the module be used only in the Bachelor's degree subject Biologie (Biology) with 180 ECTS credits, places will be allocated according to the selection process of group 1.

This module will explore general aspects on how students may incorporate field trips to out-of-classroom learning environments into their teaching. In addition to the scientific identification and characterisation of plant and/or animal communities in their natural habitats, the seminar will discuss didactic and pedagogical criteria for the selection of out-of-classroom learning environments that are relevant for the respective type of school. In this context, the course will also discuss the opportunities and limitations of out-of-classroom learning in *Grundschule*. Designing practice-oriented teaching units, students will practise teaching the identification of indigenous animals and plants to fellow students and/or groups of pupils in selected out-of-classroom learning environments.

Intended learning outcomes

[Version 1: - Overview of the duties and responsibilities of teachers. - Insight into the following acts and regulations: BayEUG, LDO, GSO, VSO and RSO. - Insight into causes of disruption as well as ways to deal with disruptive pupils and prevent disruption. - Overview of disciplinary measures. - Overview of methodical variations in the implementation of open methods for teaching biology. - Ability to prepare a range of teaching aids for the biology classroom.] [Version 2: - Knowledge on the emergence and types of typical health-impairing conditions. - Insight into selected theories that may help explain why children and adolescents adopt typical health-impairing behaviours. - Overview of older and current approaches to the prevention of specific behaviours. - Subject-specific and didactic knowledge necessary to teach topics in health education. - Insight into the scientific principles behind these topics. - Ability to translate topics in the area of health education from the curriculum for the respective type of school, in a didactically reduced manner, into teaching sequences, teaching units and lessons. -Ability to design an interdisciplinary prevention programme, to be taught over the course of one school year, that is tailored to the type of school and the respective group of pupils. - Ability to implement measures to support the personal development of pupils.]

Courses (type, number of weekly contact hours, language — if other than German)

Ü (no information on SWS (weekly contact hours) and course language available)

Method of assessment (type, scope, language — if other than German, examination offered — if not every semester, information on whether module can be chosen to earn a bonus)

seminar paper (10 to 15 pages)

| Conten | | | | | th issues faced by many children | |
| and adolescents in Germany today; we will discuss different types of these health issues as well as related theo- ries. We will discuss the topics drugs and substance abuse, sex education, unhealthy eating habits and lack of exercise and will focus on different contents and skills each semester. Large parts of the course will be devoted to developing teaching units tailored to the respective type of school that encourage pupils to adopt healthy ha- bits. These units will be aimed at changing and preventing unhealthy habits as well as promoting comprehensive and ongoing health education. At the same time, we will explore general measures (e. g. raising the self-esteem or self-efficacy of pupils) as well as measures related to specific topics in both theory and practice. We will im- plement these measures and will also take interdisciplinary aspects into account. | | | | | | |
| Intend | ed lear | ning outcomes | | | | |
| Knowledge on the emergence and types of typical health-impairing conditions. Insight into selected theories that may help explain why children and adolescents adopt typical health-impairing behaviours. Overview of older and current approaches to the prevention of specific behaviours. Subject-specific and didactic knowledge necessary to teach topics in health education. Insight into the scientific principles behind these topics. Ability to translate topics in the area of health education from the curriculum for the respective type of school, in a didactically reduced manner, into teaching sequences, teaching units and lessons. Ability to design an interdisciplinary prevention programme, to be taught over the course of one school year, that is tailored to the type of school and the respective group of pupils. Ability to implement measures to support the personal development of pupils. | | | | | | |

| Using examples from the classroom, the seminar will acquaint students with specific teaching aids (originals, preparations and media) for use in the biology classroom and will assess these with regard to the media literacy skills to be developed. The seminar will discuss both traditional aids used in the biology classroom and modern media. After having received a theoretical introduction to teaching aids, students will be arranged into small teams that will deliver lessons or individual phases of lessons on specific topics from the curriculum. They will focus on a teaching aid of their choice which will subsequently be assessed with regard to aspects of media didactics. | | | | | | |

| will con discus with es | This lecture will acquaint teaching degree students with the basic guidelines for teaching topics in biology and will contrast basic rules of rhetoric and communication with biological behaviour. In addition, the lecture will discuss a variety of approaches to explaining personality, character and temperament and will contrast these with established biological models. The lecture will also explain the biological bases of thought and feeling as well as the causes of differences in motivation, in particular with regard to the development of personal skills. | | | | | |
