

LIST OF ACCEPTED POSTERS - PLMCN18

ID	Name	Affiliation	Title	Poster Cat./No.
3	Prof. Yuri Pusep	IFSC/USP	Shake-up Effects in Photoluminescence of Integer Quantum Hall Quantum Wells	P3-003
4	Prof. Vladimir Romyantsev	A.A.Galkin Donetsk Institute for Physics and Engineering, 83114, Donetsk, Ukraine	Polaritonic spectrum sensitivity of 2D array of coupled microcavities containing quantum dots on an elastic deformation	P1-004
6	Prof. Oleg Yeshchenko	National Taras Shevchenko University of Kyiv	Gold nanoparticle plasmon resonance in electrodynamically coupled Au NPs monolayer / dielectric spacer / Al film nanostructure: Tuning by variation of	P5-006
7	Prof. Oleg Yeshchenko	National Taras Shevchenko University of Kyiv	Photoluminescence of fullerene C60 thin film in plasmon coupled Au NPs monolayer – C60 film – Al film nanostructure	P5-007
8	Prof. Kazunobu Kojima	Tohoku University	A theoretical proposal for achieving more than 90% of the overlap integral of electron and hole wavefunctions in high AlN mole fraction Al _x Ga _{1-x} N multiple	P3-008
9	Prof. Vladimir Kosobukin	Ioffe Physical Technical Institute, Russian Academy of Sciences, Saint-Petersburg, Russia	Spectroscopy of plasmon-excitonic polaritons in nanostructures: theory	P3-009
10	Dr. Ting-Wei Chen	Department of Electrophysics, National Chiayi University	Instability of two-dimensional ring dark solitons in microcavity polariton condensates	P2-010
11	Dr. Weihang Zhou	National High Magnetic Field Center, Huazhong University of Science and	Enabling the direct coupling between dark exciton and photon in single-walled carbon nanotubes via high magnetic field	P4-011
13	Igor Khanonkin	Electrical Engineering and Russel Berrie Nanotechnology Institute, Technion, Israel	Carrier dynamics of the InP-based QD semiconductor optical amplifier. Experimental and simulation results	P7-013
19	Artem Strashko	University of St Andrews	Raman scattering with strongly coupled vibron-polaritons	P2-019
21	Dr. Stefan C.J. Meskers	Technische Universiteit Eindhoven	Exciton-polaritons in molecular crystals	P2-021
24	Prof. Sveatoslav Moskalenko	Institute of Applied Physics, Academy of Sciences of Moldova	Dispersion laws and the Hopfield coefficients of the two-dimensional cavity magnetoexciton-polaritons	P3-024
25	Prof. Sveatoslav Moskalenko	Institute of Applied Physics, Academy of Sciences of Moldova	Interaction of the two-dimensional magnetoexcitons with wave vectors $k=0$ under the influence of the Rashba spin-orbit coupling and Zeeman splitting	P3-025
26	Prof. Ricardo Leon Restrepo Arango	Universidad EIA	Intense laser field effects on the nonlinear optical properties in multiple-step quantum wells	P3-026
27	Prof. Ricardo Leon Restrepo Arango	Universidad EIA	Mid-Infrared nonlinear optical transitions of the delta-doped AlGaAs/GaAs triple quantum well	P3-027
30	Dr. Donghai Li	Institute for Physical and Theoretical Chemistry, University of Würzburg	Coherent 2D microscopy: probing ultrafast energy transfer processes on nanoscale	P5-030
32	Florian Ungar	Universität Bayreuth	Non-monotonic exciton spin decay in II-VI diluted magnetic semiconductors	P3-32

33	Prof. Der-Yuh Lin	National Changhua University of Education	Optical and electric transport properties of undoped and niobium doped tungsten diselenide	P4-O33
34	Elena Rozas Jiménez	Dept. Física de Materiales and Institute Nicolás Cabrera, UAM, Spain	Coherence of traveling polariton condensates: thermal robustness	P2-O34
35	Dr. Stella Kutrovskaia	Russian Quantum Center	Laser synthesis of a metal-carbyne clusters for SERS effects	P6-O35
36	Dr. Armenuhi Ghazaryan	Centre of Strong Fields Physics, Yerevan State University	Nonlinear Absorption Coefficient of Doped Graphene at Conductive Electrons Scattering on Charged Impurities	P4-O36
44	Dr. Nobuhiko Yokoshi	Osaka Prefecture University	Influence of optical vortex radiation on conduction electrons	P3-O44
45	Prof. Tsong-Sheng Lay	National Chung Hsing University, Taiwan	Micro-Raman spectroscopy on InGaAs quantum dots in DBR-coupled double cavity	P6-O45
46	Dr. Jun-ichi Inoue	National Institute for Materials Science	Emergence of cooperative time-reversal and glide symmetry in a laser driven system	P5-O46
48	Andrey Zhukov	National Research Nuclear University (MEPhI)	Parametrically driven hybrid qubit-photon systems: Quantum effects amplification due to the energy dissipation	P1-O48
49	Andrey Zhukov	National Research Nuclear University (MEPhI)	Superconducting qubit in a nonstationary transmission line cavity: parametric excitation, periodic pumping, and energy dissipation	P1-O49
51	Prof. Fazel Jahangiri	Laser and Plasma Research Institute Shahid Beheshti University, Tehran, Iran	Pulsed Terahertz emission from carbon nanotubes irradiated by ultrashort laser pulses	P4-O51
54	Dr. Thilo Stöferle	IBM Research - Zurich	Strongly confined exciton-polariton Bose-Einstein condensates at room temperature	P2-O54
56	Michael Zocher	University of Hamburg	Self-aligned coupled quantum structures in droplet etched nanoholes	P6-O56
62	Dr. Peter Kirton	University of St Andrews	Spectral and ground state properties of vibrationally dressed organic polaritons	P2-O62
63	Steffen Richter	Universität Leipzig	Anisotropic microcavities and the occurrence of circularly polarized exceptional points	P5-O63
67	Dr. Hiroshi Sugimoto	Department of Electrical and Electronic Engineering, Graduate School of Engineering,	Size-Dependent Energy Level Structures in Donor and Acceptor Codoped Silicon Quantum Dots	P6-O67
69	Prof. Ryoko Shimada	Japan Women's University	Generation of large temperature gradient through plasmonic heating from periodic metal domain	P5-O69
70	Dr. Saifeng Zhang	Shanghai Institute of Optics and Fine Mechanics, Chinese Academy of Sciences,	Nonlinear Optical Absorption of Mono- and Few-layer WS ₂ , MoS ₂ Films and BP Nanosheets	P4-O70
71	Prof. Ivan Savenko	Institute for Basic Science, Daejeon 34051, Republic of Korea	Paramagnetic and Fano resonances in hybrid systems	P3-O71
72	Dr. David Colas	School of Mathematics and Physics, University of Queensland, Australia	Novel soliton dynamics in one dimensional open-dissipative polariton systems	P2-O72

75	Valentina Litvyak	Saint Petersburg State University, Russia	Energy spectrum of excited p-, d- and f- states in PbS nanocrystals revealed by light absorption	P6-075
76	Morteza Navadeh Toupchi	EPFL	Polaritonic Cross Feshbach Resonance	P2-076
79	Dirk Heinze	Department of Physics and CeOPP, Warburger Strasse 100, Paderborn, Germany	Quantum Light Sources based on Two-Photon Emission from a Quantum – Dot Biexciton	P7-079
80	Mathias Sasserma	University of Innsbruck	Correlated Photon Pairs From Polariton Parametric Scattering	P7-080
81	Paul Hilaire	Center of Nanosciences and Nanotechnology, CNRS, University Paris Sud, Marcoussis, France	Light-matter interfacing with quantum dots: a polarization tomography approach	P1-081
84	Maximilian Waldherr	Technische Physik, Universität Würzburg, Germany	CVD Growth of Two-Dimensional Transition Metal Dichalcogenides	P4-084
85	Ilya Milekhin	Rzhanov Institute of Semiconductor Physics RAS, Novosibirsk, Russia	Surface-enhanced IR Absorption by Optical Phonons in Semiconductor Nanocrystals on Au Nanoantenna Arrays	P5-085
86	Hüseyin Vural	Institut für Halbleiteroptik und Funktionelle Grenzflächen, Universität Stuttgart	Quantum dots interfaced with Cs atoms: delay and quantum interference of single photons	P1-086
87	Marcel Wille	Felix-Bloch-Institut für Festkörperphysik, Universität Leipzig, Leipzig	Lasing in cuprous iodide microwires	P7-087
88	Marcel Wille	Felix-Bloch-Institut für Festkörperphysik, Universität Leipzig, Leipzig	Ultrafast Dynamics of the Optical Properties of ZnO-based Nanocavities	P7-088
89	Dr. Paweł Podemski	Wrocław University of Science and Technology, Poland	On the development of photoluminescence excitation spectroscopy in the telecommunication spectral range	P6-089
91	Darius Urbonas	IBM Research–Zurich, Säumerstrasse 4, 8803 Rüschlikon, Switzerland	Tunable coupled Gaussian defect microcavities supporting zero-dimensional polaritons in a π -conjugated polymer at room-temperature	P2-091
92	Dr. Joe Wilkes	School of Physics and Astronomy, Cardiff University, Cardiff CF24 3AA, UK	Electrically driven crossover from repulsive to attractive interactions between dipolar excitons	P3-092
93	Martin Klaas	Technische Physik, Universität at Würzburg, Germany	Evolution of temporal coherence in confined polariton condensates	P2-093
94	Dr. Anastasia Shestakova	Moscow Technological University	Highly sensitive photodetector based on MoS2 monolayer	P4-094
95	Dr. Simone Luca Portalupi	IHFG - University of Stuttgart	Deterministic fabrication of advanced solid immersion lenses combining low temperature lithography and 3D laser printing	P6-095
96	Dr. Nataliya Berezovska	Taras Shevchenko National University of Kyiv	Plasmonic coupling effects in near-field coupled Au NPs layer/ Al film nanostructures	P5-096
97	Tobias Simmet	Walter Schottky Institut, Am Coulombwall 4, 85748 Garching, Germany	Three-stage decoherence dynamics of an electron spin qubit in an optically active quantum dot	P1-097
98	Bastian Miller	Walter Schottky Institut und Physics Department, TU Munich, Germany	Long-lived, polarized interlayer excitons in van der Waals heterostructures	P4-098

99	Giuseppe Buonaiuto	University of Sheffield	Strong antibunching in microcavity polaritons	P2-099
101	Dr. Kai Müller	Walter Schottky Institut - TU Munich	Optically probing spin qubit coherence without coherent control	P1-101
102	Xuekai Ma	Universität Paderborn, Germany	Creation and manipulation of dark solitons and vortices in microcavity polariton condensates	P2-102
103	Dr. Xiaofei Wu	Experimental Physics 5, University of Würzburg, Germany	A quantum plasmonic nanocircuit on a semiconductor platform	P5-103
104	Pavel Sokolov	TU Dortmund	Subsecond nuclear spin dynamics in n-doped GaAs	P1-104
105	Dr. Igor Chestnov	Vladimir State University	Exciton-polariton dynamics in a one-dimensional lattice	P2-105
106	Dr. Alexei Vagov	University of Bayreuth	Superanomalous skin effect for surface plasmon-polaritons	P5-106
108	Dr. Paweł Mrowiński	Wrocław University of Science Technology, Poland	Enhanced polarization anisotropy of excitonic emission from a single InAs quantum dash at telecommunication wavelengths	P6-108
110	Dr. Haodong Qiu	Nanyang Technological University	Strongly interacting light and matter in ultrathin topological insulator	P3-110
111	Lukas Hanschke	Walter Schottky Institut, TU München	Non-linear two-photon resonance fluorescence on a single optically active quantum dot	P1-111
112	Tom Michalsky	Felix Bloch Institute for Solid State Physics, Universität Leipzig, Germany	Spatial and temporal evolution of coherent polariton modes in ZnO microwire cavities	P2-112
113	Dr. Kathrin Sebald	Semiconductor Optics, Institute for Solid State Physics, University of Bremen, Germany	Bragg polaritons in hybrid ZnSe-based unfolded microcavities	P2-113
114	Dr. Francois Reveret	Institut Pascal - CNRS	Low threshold lasing in bulk GaN microcavity up to 400 K	P7-114
115	Sebastian Pres	IPTC, University of Würzburg	A versatile facility for the time- and space-resolved investigation of surface dynamics	P5-115
116	Pavel Belov	St. Petersburg State University	Radiative decay rate of excitons in square quantum wells	P3-116
118	Omar Jamadi	Institut Pascal, Université Clermont Auvergne, CNRS, 63000 Clermont-Ferrand, France	Guided-modes in ZnO and GaN half-microcavities: room-temperature lasing	P7-118
119	Dr. Petr STEPANOV	Institut Néel, Université Grenoble Alpes and CNRS, B.P. 166, 38042 Grenoble, France	Non-equilibriumness in quantum fluids of exciton polaritons	P2-119
120	Prof. Doris Reiter	Institut für Festkörperteorie, Universität Münster, 48149 Münster, Germany	Phonon effects on time-resolved pump-probe signals of a continuously driven quantum dot	P1-120
121	Prof. Sylwia Zielinska-Raczynska	Institute of Mathematics and Physics, University of Science and Technology, Poland	Nonlinear optics enabled by strongly interacting Rydberg Excitons in Cu2O	P3-121
122	Dr. Gabriel Ethier-Majcher	University of Cambridge	Narrowing of the Overhauser field in a quantum dot via coherent population trapping	P1-122

123	Dr. Christopher Gubbin	University of Southampton	Chi-2 Nonlinear Polaritonics with Surface Phonon Polaritons	P2-123
126	Jan-Philipp Jahn	Department of Physics, University of Basel, Switzerland	A semiconductor source of single photons with controlled temporal wave packets for optimized interface with atomic memories	P7-126
127	Eliezer Estrecho	Research School of Physics and Engineering, The Australian National University	Single-shot imaging of exciton-polariton condensates	P2-127
128	Prof. Chun-Rong Lin	National Pingtung University	Temperature-dependent light-scattering studies of the wüstite@carbon core-shell nanocrystals	P4-128
129	David Ziemkiewicz	UTP University of Science and Technology	Tunable plasmonic resonances in EIT media	P5-129
131	Takuya Matsuda	Osaka Prefecture University	Optical properties in exciton-light-plasmon coupled system in a metal-CuCl heterostructure	P5-131
132	Priya Priya	Department of Physics, Indian Institute of Technology (IIT), Ropar, India	Observation of strong photonic effects from single domains of 3D photonic crystals	P5-132
133	Prof. Kouichi Takase	College of Science and Technology, Nihon University	Fabrication and optical properties of Ni/Au bimetal multilayer nanowires	P6-133
134	Dr. Rajesh Nair	Department of Physics, Indian Institute of Technology (IIT), Ropar, India	Engineering the emission decay rates using intentionally tuned structural disorder in photonic crystals	P5-134
136	Jonas Gessler	Veeco Instruments	Growth challenges in the fabrication of devices for light-matter coupling and related applications	P6-136
137	Prof. Der-Jun Jang	National Sun Yat-sen University	Carrier recombination dynamics in multi-stacked InAs/GaAs quantum dots	P6-137
139	Prof. Thierry Guillet	Université de Montpellier	Interplay between vertical emission and guided emission in a ZnO microcavity polariton laser	P2-139
141	Prof. Sylwia Zielinska-Raczynska	Institute of Mathematics and Physics, University of Science and Technology, Poland	Magneto- and Electro-optical Functions of Rydberg Excitons in Cu ₂ O	P3-141
142	Dr. Ugo Cataldi	Department of Physical Chemistry, University of Genève, Switzerland	Optical control of plasmonic heating effects using reversible photo-alignment of nematic liquid crystals	P5-142
143	Yutaro Goto	Department of Physics and Electronics, Osaka Prefecture University	Magnetic order control through spin-spin interaction induced by an optical vortex radiation	P1-143
144	Prof. Xianggang Qiu	Institute of Physics, Chinese Academy of Sciences	Plasmonics in superconducting MgB ₂ thin films with subwavelength antidots	P5-144
145	Dr. Maria Kuznetsova	Spin Optics laboratory, Saint-Petersburg State University	Nuclear spin relaxation in InGaAs quantum dots under slow polarization modulation of optical excitation	P1-145
146	Dmitry Smirnov	Ioffe Institute, St.-Petersburg, Russia	Theory of nonequilibrium single-electron spin noise	P1-146
147	Johannes Beierlein	Technische Physik, Universität at Würzburg, Germany	Exciton-polariton devices for photonic integrated circuits	P7-147

149	Dr. Nina Owschimikow	Institut für Optik und Atomare Physik, Technische Universität Berlin	Ultrafast carrier recovery and large nonlinear optical response in submonolayer quantum dots	P6-149
150	Dr. Nina Owschimikow	Institut für Optik und Atomare Physik, Technische Universität Berlin	Valley polarization dynamics of resonantly excited charged excitons in WSe ₂	P4-150
152	Dr. Pradip Jha	DDU COLLEGE, UNIVERSITY OF DELHI	Optical Absorption in Rashba Coupled 2D Quantum Ring in presence of Magnetic Field	P1-152
157	Jakob Wierzbowski	Walter Schottky Institut and Physik-Department, Technische Universität München,	Electrical control of symmetry breaking in bilayer MoS ₂	P4-157
159	Dr. Rahul Jayaprakash	Department of Physics & Astronomy, The University of Sheffield, U.K.	Strong coupling in a microcavity containing the biomolecule β -carotene	P2-159
160	Dr. Jih-Sian Tu	Peter Grunberg Institute, Forschungszentrum Julich, DE-52425 Julich, Germany	Manipulation of electronic and optical band gaps in transition metal dichalcogenide monolayers by dielectric cladding	P4-160
162	Mateusz Krol	Institute of Experimental Physics, Faculty of Physics, University of Warsaw, Poland	Non-equilibrium condensation of exciton-polaritons in semiconductor microcavities containing Mn ions	P2-162
163	Rafal Mirek	Institute of Experimental Physics, Faculty of Physics, University of Warsaw, Poland	Angular dependence of giant Zeeman effect for semimagnetic cavity polaritons	P2-163
165	Jakob Wierzbowski	Walter Schottky Institut and Physik-Department, Technische Universität München,	Long-lived quantum emitters in hBN-WSe ₂ van-der-Waals heterostructures	P4-165
166	Dr. Andreas Mischok	Dresden Integrated Center for Applied Physics and Photonic Materials (IAPP), TU Dresden	Novel cavity-enhanced organic NIR detectors targeting the intermolecular charge-transfer state	P7-166
168	Matthias Salewski	Experimentelle Physik 2, Technische Universität Dortmund	High resolution two-dimensional optical spectroscopy of electron spins in a n-type CdTe quantum well	P3-168
169	Matthias Salewski	Experimentelle Physik 2, Technische Universität Dortmund	Photon echoes from (In,Ga)As quantum dots embedded in a Tamm-plasmon microcavity	P1-169
170	Dr. Colin Rawlings	IBM Research - Zurich	Accurate fabrication of photonic molecules using closed loop thermal Scanning Probe Lithography	P6-170
171	Dr. Maria Vladimirova	Laboratoire Charles Coulomb, CNRS-University of Montpellier	Spin relaxation of indirect excitons: hyperfine versus spin-orbit interactions	P3-171
172	Dr. Dmitry Solnyshkov	Institut Pascal, Université Clermont-Auvergne	Effective theory of non-adiabatic quantum evolution based on the quantum geometric tensor	P5-172
174	Olivier Bleu	Institut Pascal, Université Clermont-Auvergne	Quantum valley Hall effect and perfect valley filter based on photonic analogs of transitional metal dichalcogenides	P4-174
175	Dr. Ryo Hanai	Department of Physics, Keio University	Photoluminescence of a highly excited exciton-polariton condensate with pumping and decay	P2-175
176	Antonio Gianfrate	CNR Nanotec, Istituto di Nanotecnologia, Via Monteroni, 73100 Lecce, Italy	Exciton Polariton X-waves	P2-176
177	Davide Caputo	CNR NANOTEC Institute of Nanotechnology, Via Monteroni, 73100 Lecce, Italy	Space and time coherence in 2D polariton condensates	P2-177

178	Moritz Wenclawiak	TU Wien, Institut für Photonik	A study of interaction mechanisms with confined meta-atoms	P5-178
181	Prof. Yaw-Teng Tseng	National Pingtung University	Size effect in the magnetic circular dichroism spectra of Y ₂ BiFe ₅ O ₁₂ nanoparticles	P6-181
182	Holger Suchomel	Technische Physik, Universität Würzburg, Germany	Polariton lasing and room temperature strong coupling in a semiconductor microcavity with embedded AlGaAs quantum wells	P7-182
183	Dr. Moritz Cygorek	Theoretische Physik III, Universität Bayreuth	Path-integral simulations of phonon influences on laser-driven quantum dots in cavities	P1-183
185	Dr. Lukasz Dusanowski	Technische Physik, University of Würzburg	Temperature dependent photon emission statistics and dynamics of a trion confined in an InAs quantum dash	P6-185
186	Ulrich Czopak	Institut für Experimentalphysik, Universität Innsbruck	Side Excitation of Polaritonic Molecules	P2-186
187	Prof. Ivan Ignatiev	Spin Optics Laboratory, St. Petersburg State University	Exciton-light coupling in quantum wells in magnetic field	P3-187
188	Dr. Sebastian Klemmt	Technische Physik - University of Würzburg, Germany	Dirac-cone and flatband dispersions in 2D-polariton lattices: A versatile platform for topological photonics	P5-188
189	Daniele Pellegrino	Eindhoven University of Technology	Tunable radiative transitions from quantum dots in photonic crystals	P1-189
191	Yoseob Yoon	MIT	Effects of strong interaction between exciton-polaritons	P2-191
195	Ioannis Chatzopoulos	University of Southampton	Road to SiC spin-photon interfacing	P1-195
197	Dr. Alessia Castellini	Università degli Studi di Palermo (Italy), INFN di Catania (Italy), Université Bourgogne	Quantum information process between controlled emitters via Quantum Plasmonics	P1-197
198	Julian Klein	Walter Schottky Institut und Physik Department, TU München, Germany	Helium ion modified luminescence and valley depolarization of atomically thin MoS ₂	P4-198
200	Joachim Ciers	Institute of Physics, École Polytechnique Fédérale de Lausanne (EPFL), Switzerland	Propagating Polaritons in III-Nitride Slab Waveguides	P2-200
201	Kateryna Pistunova	Harvard University	Gate dependent electroluminescence of interlayer excitons in two-dimensional heterostructures	P4-201
203	Daniel Fonnegra	National University of Colombia	Off-axis donor energy structure in non-uniform quantum strip with double azimuthal potential barriers	P1-203
204	Felix Spitzer	TU Dortmund	Exciton-assisted TMOKE in CdMnTe/CdMgTe quantum well structures	P3-204
205	Mäx Blauth	Walter Schottky Institut, Technische Universität München	Enhanced optical activity of atomically thin MoSe ₂ proximal to nanoscale plasmonic slot-waveguides	P4-205
206	Daniel Schmidt	Experimentelle Physik 2, Technische Universität Dortmund, D-44227 Dortmund,	Oscillation of the degree of circular polarization: Dynamics of the optical spin Hall effect in GaAs microcavities	P2-206

209	Alexander Poshakinskiy	Ioffe Institute, St. Petersburg, Russia	Optical activity and circular birefringence in chiral van der Waals stacks	P4-209
210	Kirill Grishunin	Moscow Technological University (MIREA), Vernadsky Ave. 78, Moscow 119454, Russia	Kinetics of Photoexcited Carriers in WSe2 Monolayer	P4-210
211	Dr. Sergei Gavrilov	Institute of Solid State Physics	Spatiotemporal spin chaos in cavity-polariton systems	P2-211
215	Dr. Sergey Poltavtsev	Physics Department, TU Dortmund, Germany	Damping of Rabi oscillations in Intensity-Dependent Photon Echoes from a CdTe single quantum well	P3-215
216	Adriana Gelvez	Universidad Industrial de Santander	Molecular character of a lateral triple quantum dot structure under external fields	P1-216
217	Aleksander Bogucki	Faculty of Physics, Institute of Experimental Physics, University of Warsaw	Optically detected magnetic resonance as a tool for precise determination of strain in magnetic quantum wells	P3-217
218	Dr. Philippe St-Jean	CNRS - Université Paris-Saclay	Polariton lasing in the edge states of an orbital SSH chain	P5-218
219	Dr. Wojciech Pacuski	University of Warsaw	Lift-off process for II-VI semiconductor microcavity and for optical transmission studies of exciton-polaritons	P6-219
220	Oliver Iff	Technische Physik, University of Wuerzburg, Germany	Exciton-trion competition and single photon emission in hybrid III-V- monolayer devices	P4-220
221	Dr. Joe Wilkes	Cardiff University	Indirect exciton transport in high magnetic fields	P3-221
222	Daniel Riedel	Department of Physics, University of Basel, Basel CH-4056, Switzerland	Deterministic enhancement of coherent photon generation from a nitrogen-vacancy center in ultrapure diamond	P7-222
223	Dr. Thomas Volz	Department of Physics and Astronomy, Macquarie University, Sydney, Australia	Room-temperature spontaneous superradiance from single diamond nanocrystals	P1-223
224	Dr. Tomasz Jakubczyk	Institut Néel, CNRS Grenoble	Coherent exciton dynamics in MoSe2 monolayers revealed with four-wave mixing micro-spectroscopy	P4-224
227	Dr. Mateusz Goryca	University of Warsaw, Institute of Experimental Physics, Warsaw, Poland	Magnetic Field Induced Polarization Enhancement in Monolayer Tungsten Dichalcogenides	P4-227
228	Krzysztof Sawicki	Faculty of Physics, University of Warsaw	Lasing from a CdSe/(Cd,Mg)Se superlattice embedded in a ZnTe based microcavity	P7-228
229	Laura Tropic	School of Physics and Astronomy, University of St Andrews	The influence of optical material characteristics on strong coupling in organic semiconductors	P2-229
234	Maciej Ściesiek	Institute of Experimental Physics, Faculty of Physics, University of Warsaw, Poland	Coupled photonic molecules in single micropillar geometry based on ZnTe optical microcavities	P6-234
235	Prof. Ismael Rivera	Institución Universitaria Pascual Bravo	Two-hydrogenic vertically stacked Ga _{1-x} Al _x As nanoscale rings: simultaneous effects of hydrostatic pressure, aluminum concentration, magnetic field and	P1-235
236	Prof. Marlon Fulla	Universidad Nacional de Colombia sede Medellín, Colombia	Combined effects of temperature, hydrostatic pressure and aluminum concentration on the D ₀ quantum levels confined in a elliptical Ga _{1-x} Al _x As	P1-236

237	Cristian Cortes	Purdue University	Super-Coulombic atom-atom interactions in hyperbolic media	P5-237
239	Dr. Michael Fraser	RIKEN Center for Emergent Matter Science, Japan	Dynamics of trapped heavy exciton-polariton condensates	P2-239
240	Shuhei Oono	Graduate School of Pure and Applied Sciences, University of Tsukuba, Japan	Topological edge modes of light in all dielectric chiral woodpile structures stacked with $\pi/4$ in-plane rotation	P5-240
242	Christoph Redlich	Institut für theoretische Physik, TU Berlin	High beta QD microlasers subject to time-delayed optical feedback	P7-242
244	Dr. Laxmi Narayan Tripathi	Technische Physik, Universität Würzburg, Germany	Optical Properties of WSe ₂ monolayers on metal films	P4-244
245	Tristan Harder	Technische Physik, University of Würzburg, Germany	Visualization of Dirac cones in polariton lattices using hyperspectral imaging	P2-245
246	Sebastian Stoll	Julius-Maximilians Universität Würzburg	Room temperature strong coupling of WS ₂ monolayers in a Tamm structure	P4-246
247	Dr. Dier Jameel	University of Zakho and University of Nottingham	Electrical properties of sulfonated polyaniline (SPAN)/GaAs hybrid heterostructures grown on (100) and high index GaAs planes	P6-247
250	Maximilian Markard	Technische Physik, Universität Würzburg, Würzburg, Germany	Towards polariton condensation in hybrid organic-inorganic microcavities	P2-250
251	Marco Dusel	Technische Physik, Universität Würzburg, Würzburg, Germany	Three-dimensional photonic confinement in imprinted liquid crystalline pillar microcavities	P6-251
253	Simon Betzold	Technische Physik, Julius-Maximilians-Universität Würzburg, Germany	Tunable light-matter hybridization in open organic microcavities	P2-253
256	Dr. Hugo Flayac	EPFL Lausanne Switzerland	Nonclassical statistics in semiconductor microcavities	P1-256
257	Christoph Fleckenstein	Würzburg Universität	Chiral anomaly in real space from stable fractional charges at the edge of a quantum spin Hall insulator	P1-257
260	Dr. Mehdi Pakmehr	Shiraz University, Buffalo University	Study of deeply situated GaAs based 2DEGs through THz magneto-Photoresponse Spectroscopy	P3-260
267	Prof. Carlos Duque	Universidad de Antioquia UdeA, Medellín, Colombia	Electromagnetic induced transparency in GaAs-Al _x Ga _{1-x} As step-like quantum wells: hydrostatic pressure and temperature effects	P3-267
279	Sebastian Dietl	Walter Schottky Institut, TU Munich, Am Coulombwall 4a, 85748 Garching, Germany	Coherence and propagation dynamics of trapped dipolar excitons	P3-279
